INDEX OF AUTHORS
and SUBJECTS

Vols 1 - 25

B570.5
Au78

SUBJECT INDEX

Aborigines, Australian, straight and wavy-haired individuals, supposed distinction of, into (Tiegs), 4, 31.

Aborigines, Australian, basal metabolism of some (Wardlaw and Horsley), 5, 263.

Aborigines, Central Australian, blood grouping, further results in (Cleland), 7, 79.

Aborigines, Australian, basal metabolism of, further observations on the (Wardlaw and Lawrence), 10, 157.

Aborigines, Australian, blood grouping of (Cleland), 3, 33.

Aborigines, Australian, energy metabolism and insensible respiration of (Wardlaw, Davies and Joseph), 12, 63.

Aborigines, Australian, food, the chemical composition of some plants used by (Dadswell), 12, 13.

Aborigines, Australian, mentality of the (Fry and Pulleine), 8, 153.

Aborigines, Australian, naked, and naked whites exposed to similar environmental changes, a comparison of the skin temperature, and skin circulation of (Goldby, Hicks, O'Connor and Sinclair), 16, 29.

Aborigines, Australian, naked, effect of changes of environmental temperature on the skin circulation of, as measured by the Sahli-Jaquet volume-bolograph (Hicks and O'Connor), 16, 19.

Aborigines, Australian, polynuclear count in (Maegraith), 16, 241.

Aborigines, Australian, respiratory exchange of the (Hicks, Moore and Eldridge), 12, 79.

Aborigines, Australian, skin temperature of, under varying atmospheric conditions (Hicks and O'Connor), 16, 1.

Aborigines, Australian, standard metabolism of (Hicks, Matters and Mitchell), 8, 69.

Aborigines, Australian, standard metabolism of (Hicks and Matters), 11, 177.

Aborigines, Australian, and whites, the haemoglobin and solids of the blood of (Wardlaw, Barry, McDonald and McIntyre), 13, 1.

Absorption, selective, of chlorine ions of water by *Atriplex* leaves (Wood), 2, 45.

Acanthophis antarcticus, venom of the death adder (Kellaway, Freeman and Williams), 6, 245.

Acetaldehyde, origin of, in bacterial and animal metabolism (Whetham), 4, 35.

Acetylcholine and histamine, experiments on the problem of 'free' and 'bound' (Trethewie), 16, 225.

Acetylcholine (?), cardio-depressor substance, released by dorsal nerve root stimulation (Tiegs), 12, 161.

Acetylcholine, formation of, in the body (Shaw), 13, 251.

Acetylcholine, liberation of, from the bowel following nerve stimulation, influence of sodium iso-amyl-ethyl barbiturate upon the (Trethewie), 20, 9.

Acetylcholine, synthesis of, by brain tissue (Trethewie), 16, 343.

Achromobacter perolens (n.sp.), cause of mustiness in eggs (Turner), 4, 57.

Acridine Dyes, influence on multiplication of infusoria (Robertson), 2, 21.

Actinomyces dermatonomus (n.sp.), dermatomycosis of the sheep (lumpy or matted wool) due to (Bull), 6, 301.

Adenyl Compounds and histamine, liberation of, by the toxin of Cl. welchii type D (Kellaway, Trethewie and Turner), 18, 253.

Adenyl Compounds, extraction of, from tissues, a note on the (Kellaway and Trethewie), 18, 265.

Adenyl Compounds, liberation of, from perfused organs by cobra venom (Kellaway and Trethewie), 18, 63.

Adenyl Compounds, pharmacology of, contribution to the, with a note on their occurrence in red blood cells (Robertson and Shaw), 19, 207.

Adenyl Content of skeletal muscle after denervation, change in the (Reid), 20, 197.

Adrenal Ascorbic Acid, determinations of the (Trikojus and Ellis), 17, 441.

Adrenal Cortex and luteinisation (Hicks and Matters), 13, 27.

Adrenal Gland, effects of stimulation of the, upon its content of ascorbic acid, adrenalin and glutathione (Kuchel and Mitchell), 14, 51.

Adrenal Gland, extract from the, causing luteinization of the ovaries and endometrial hyperplasia (Allen and Bourne), 14, 45.

Adrenal Gland, septicaemia, and low grade diphtheria antitoxin (Bourne), 13, 133.

Adrenal Gland, study on the Golgi apparatus of the (Bourne), 12, 123.

Adrenal Glands, staining of vitamin C in the (Bourne), 11, 261.

Adrenalectomy, effect of, on the responses of the guinea-pig to injections of thyrotrophic hormone (with estimations of liver glycogen and ascorbic acid) (Robinson and Trikojus), 25, 61.

1350326

Adrenalectomy, technique of, in the guinea-pig and the maintenance of the adrenal-ectomized animals (Robinson), 19, 261.
Adrenaline, chemical and physiological properties of, action of alkali on the (Shaw), 19, 151.
Adrenaline, estimation of (Shaw), 24, 53.
Agar in culture media for bacteria (Grace), 4, 269.
Agglutination, salt optima in (Platt), 16, 275.
Agglutination Optimum, the relationship of the complement fixation optimum to the (Platt), 14, 101.
Agglutinins, 'T', distribution of, in human sera (Lind and McArthur), 25, 247.
Air, carbon monoxide in, determination of small amounts of (Holden), 21, 9.
Albumin of egg, separation of proteoses from (Rudd), 1, 179.
Albuminuria of experimental nephritis, source of protein in (Kellaway, Davies and Williams), 2, 139.
Alkali Reserve and the production of oedema in the rabbit, the relationship between (Cox and Hicks), 11, 119.
Alkaloids, *Alstonia*, pharmacology and toxicity of (Keogh and Shaw), 21, 183.
Alkaloids, of *Nicotiana excelsior* and *Duboisia hopwoodii* (Hicks and Sinclair), 25, 191.
Allelocatalysis, occurrence of, in cultures of infusoria (Robertson), 4, 1.
Allelocatalytic Effect in cultures initially containing two infusoria, influence of washing upon (Robertson), 1, 151.
Alstonia Alkaloids, *see* **Alkaloids** *Alstonia*.
Alysia manducator pantzer, a relation between size of host puparia and sex ratio of (Holdaway and Smith), 10, 247.
Amines, aromatic, in body fluids, the estimation of sulphanilamides and other primary (Fanti), 18, 175.
Amino Acids, action of dilute formaldehyde solution on some (Holden and Freeman), 8, 189.
Amino Acids, proteins and other compounds, studies of the effect of concentration and of the degree of ionization on the optical refractivity of solutions of certain (Craig and Schmidt), 9, 33.
Amoebae, enucleated, attempts to prolong the life of (Clark), 22, 179.
Amoebae, enucleated, responses of, to stimuli (Clark), 22, 185.
Amphilinid cestode from an Australian tortoise (Johnston), 8, 1.
Anaesthetics, volatile and gaseous, tissue injury by (Kellaway and Trethewie), 17, 225.
Anaphylactic Experiments with extracts of liver fluke (*Fasciola hepatica*), (Kellaway), 5, 273.
Anaphylactic Experiments with globin (Holden), 5, 285.
Anopheles annulipes Walk. as a possible vector of malaria, observations on.
1. The relative susceptibility of *An. annulipes* and *An. punctulatus* var. *moluccensis* Sw. to experimental infection with malaria parasites (Roberts), 21, 259.

Anoplodiscus, a new species of trematode of the genus (Johnston), 7, 108.
Anoxaemia, ischaemia and shock (Trethewie), 25, 291.
Antibacterial Activity in members of the higher fungi
1. **Cortinarius rotundisporus** and *Psalliota* **Xanthoderma** Genev. (Atkinson), 24, 169.

Antibacterial Activity *in vitro*, detection and estimation of (Atkinson), 21, 127.
Antibacterial Substances produced by flowering plants.
1. Preliminary survey (Atkinson and Rainsford), 24, 49.

Antibacterial Substances produced by moulds.
1. Penicidin, a product of the growth of a penicillium (Atkinson), 20, 287.
2. Antibacterial substances produced by some common penicillia (Atkinson), 21, 15.
3. The detection and estimation of antibacterial activity *in vitro* (Atkinson), 21, 127.
4. The detection and occurrence of suppressors of penicidin activity (Atkinson and Stanley), 21, 249.
5. The mechanism of the action of some penicidin suppressors (Atkinson and Stanley), 21, 255.
6. The production of crystalline penicidin (Atkinson, Sheppard, Stanley and Melvin), 22, 223.
7. The activity of a further group of Australian strains of penicillium and aspergillus (Atkinson, Sheppard, Stanley and Rainsford), 22, 227.

Antibiotics from Victorian Basidiomycetes (Mathieson), 24, 57.
Antigens, hydatid, *see* **Hydatid Antigens**,
Anti-Histamines and thymoxyethyldiethylamine antagonism (Trethewie), 25, 319.
Anti-Insulin Action of anterior pituitary extracts (Nelson), 22, 131.
Aplanobacter michiganense E.F.S., food requirements of a phloem invader (Mushin), 16, 323.
Apples, metabolism of, studies in the.
1. Preliminary investigations on internal gas composition and its relation to changes in stored Granny Smith apples (Trout, Hall, Robertson, Hackney and Sykes), 20, 219.

Apricots, black-heart of, in Victoria (Cheney), 7, 91.

Aromatic Nitro Compounds, *see* **Nitro Compounds, aromatic.**
Arsenic, determination of minute amounts of, in biological materials. A new type of electrolytic cell for the production of arsine (Rawlinson), 20, 97.
Arsenic, micro-estimation of, notes on the How technique for the (Wilkinson and Greenham), 18, 341.
Arsenic Compounds, serological protection against (Singer), 20, 209.
Arthropods, trial and error and intelligence in behaviour of (Agar), 2, 151.
Ascorbic Acid, adrenal, *see* **Adrenal Ascorbic Acid.**
Ascorbic Acid and dehydroascorbic acid, estimation of, the use of formaldehyde and 2, 6-dichlorphenolindophenol in the (Lugg), 20, 273.
Ascorbic Acid, determination of, influence of ferrous iron in the (Huelin and Stephens), 25, 17.
Ascorbic Acid, effects of mineral nutrients on the concentration of, in legumes and two leaf vegetables (Ferres and Brown), 24, 111.
Ascorbic Acid in blood plasma, micro-determination of (Pecover), 25, 175.
Ascorbic Acid, *see also* **Vitamin C.**
Aspergillus and penicillium, activity of a further group of Australian strains of (Atkinson, Sheppard, Stanley and Rainsford), 22, 227.
Aspergillus fumigatus, biological activity of a substance resembling gliotoxin produced by a strain of; with a chemical analysis by J. A. Mills (Stanley), 24, 133.
Austramphilinidae, *see* **Amphilinid cestode.**
Austroicetes cruciata Sauss. (Acrididae), influence of temperature on the elimination of diapause from the eggs of the race of, occurring in Western Australia (Andrewartha), 22, 17.
Austroicetes cruciata Sauss. (Orthoptera), influence of moisture on the eggs of; with reference to their ability to survive desiccation (Birch and Andrewartha), 20, 1.
Austroicetes cruciata Sauss. (Orthoptera), influence of temperatures above the developmental zero on the development of the eggs of (Birch), 20, 17.
Auxins, investigations on the specificity of the action of, for the Avena and pea tests (Shackell), 15, 33.
Azofication in South Australian soils, stimulating effect of phosphatic fertilizers on (Lewcock), 2, 127.
Azotobacter and *Clostridium butyricum,* the occurrence and activities of, in Victorian soils (Swaby), 17, 401.
Azotobacter in some South Australian soils, notes on the occurrence of (Beck), 13, 127.
B. virus, *see* **Virus, B.**
Bacilli, acid-fast, staining of. The effects of fixatives and H-ion concentration on acid-fastness (Fielding), 12, 1.
Bacilli, coliform, lysogenicity of (McKie), 12, 169.
Bacillus, aerobic sporulating, that forms rotating and migrating colonies (Turner and Eales), 19, 161.
Bacillus aerogenes in sewage and faeces, the occurrence of (Atkinson), 12, 141.
Bacillus enteritidis gaertner, observations on a permanently lysogenic strain of (Burnet and McKie), 6, 277.
Bacillus, Pfeiffer's, two serologically active protein fractions isolated from (Platt), 17, 19.
Bacillus, Preisz-Nocard, studies on infection by and resistance to the. 1. The preparation and standardization of bacterial emulsions (Bull and Dickinson), 8, 45.
Bacillus, Preisz-Nocard, studies on infection by and resistance to the. 2. Susceptibility of the guinea-pig, and the distribution of lesions after cutaneous and sub-cutaneous inoculation and ingestion (Dickinson and Bull), 8, 83.
Bacteria, agglutination of, by antibody, observations on the rôle of sodium chloride in the (Platt), 19, 57.
Bacteria, growth, and hydrogen peroxide (Burnet), 2, 65.
Bacteria, growth, effect of dyes on (Burnet), 2, 77.
Bacteria, plant pathogenic, studies in the physiology of. Food requirements of a xylem invader, *Bacterium solanacearum,* E.F.S., and of a phloem invader, *Aplanobacter michiganense* E.F.S. (Mushin), 16, 323.
Bacteria, synergic gas production by (Atkinson), 13, 67.
Bacteria, utilization of molecular hydrogen by (Lascelles and Still), 24, 37.
Bacterial Intoxication, action of metals on (Petherick and Singer), 22, 21.
Bact. coli in water, false positive reaction in the presumptive test for (Atkinson and Wood), 16, 111.
Bact. coli-aerogenes group in water, comparative study of methods for the detection of the (Atkinson and Wood), 16, 103.
Bact. solanacearum E.F.S., food requirements of a xylem invader (Mushin), 16, 323.
Bacteriophage, comparative study of the inactivation of a, by immune serum and by bacterial polysaccharide (Burnet and Freeman), 15, 49.
Bacteriophage within lysogenic bacteria, induced lysogenicity and mutation of (Burnet and Lush), 14, 27.

Bacteriophage inactivating agent in extracts of *Staphylococcus aureus* (Freeman), 15, 221.
Bacteriophage phenomena, balanced salt action as manifested in (Burnet and McKie), 7, 183.
Bacteriophages, electrical behaviour of (Burnet and McKie), 7, 199.
Bacteriophages, physical difference amongst (Burnet), 7, 27.
Bacteriophages, staphylococcal.
1. The effect of penicillin on staphylococcal bacteriophages (Rountree), 25, 9.
2. Bacteriophage absorption by staphylococci (Rountree), 25, 203.
Bacteriophages, staphylococcal, type differences amongst (Burnet and McKie), 6, 21.
Banana, phosphatases and hexosephosphate in the (Dale), 14, 329.
Barbiturates, action of, on the isolated intestine (Shaw), 20, 117.
Barbituric acid, derivatives, estimation of (Shaw), 20, 47.
Barley Grains, germination of, studies on the (Vines), 25, 119.
Basal metabolism, *see* **Metabolism**, basal.
Basidiomycetes, antibiotics from Victorian (Mathieson), 24, 57.
Beans, broad, in Victoria, *Pythium* root rot of (Cheney), 10, 143.
Beans, 'halo blight' of, yellow bacterium associated with (Adam and Pugsley), 13, 157.
Bee venom poisoning, liberation of histamine and its rôle in the symptomatology of (Feldberg and Kellaway), 15, 461.
Beri Beri and neuritis (Woolard), 9, 173.
Bile pigment, intracorpuscular formation (Lemberg and Legge), 20, 65.
Bile pigment iron compounds and some bile pigments, the ultra-violet absorption spectra of (Holden and Lemberg), 17, 133.
Biliverdin, new preparation of (Lemberg and Legge), 18, 95.
Biological material for analysis, on a method for rapid digestion of (Bolliger), 10, 57.
Black-heart of apricots in Victoria (Cheney), 7, 91.
Black snake, *see* **Pseudechis porphyriacus**.
Black tiger snake, *see* **Notechis scutatus** var. *niger*.
Blood and bone marrow of guinea-pigs, cytology of the, following haemorrhage and administration of liver extract (Fastier), 23, 249.
Blood anti-coagulant, action of 3,3' ethylidene-bis (4-hydroxy coumarin) as a (Fantl), 22, 125.
Blood, anti-coagulant activity of diluted, perfused through the lung (Trethewie), 23, 231.
Blood, carbon monoxide in, determination of small amounts of (Holden), 21, 9.
Blood, frozen, toxicity of (Osborne), 7, 223.
Blood, human, biochemical changes occurring during the storage of (Bick), 17, 321.
Blood, micromethod for the determination of carbon monoxide in the. The carbon monoxide content of normal blood (Bland), 18, 35.
Blood of Australian aborigines and whites, haemoglobin and solids of the (Wardlaw, Barry, McDonald and McIntyre), 13, 1.
Blood of cattle and sheep, chemical and histological investigation in Victoria (Australia) of the (Norris and Chamberlin), 6, 285.
Blood of cattle and sheep, chemical investigation in Victoria (Australia), (Norris), 7, 3.
Blood analyses and lipoid glandular constituents in normal and lactating opossums (Anderson), 15, 17.
Blood cells, red, agglutination by vaccinia virus. Application to a comparative study of vaccination with egg vaccine and standard calf lymph (Nagler), 22, 29.
Blood cells, red, effect of glycine on the agglutination of human (Black), 23, 323.
Blood cells, red, modification of agglutinability by *Cl. welchii* toxins (McCrea), 25, 127.
Blood cells, red, occurrence of adenyl compounds in (Robertson and Shaw), 19, 207.
Blood cells, red, reaction between, and viruses of the influenza group. Studies with Newcastle disease viruses (Anderson), 25, 163.
Blood cells, red, surface, comparison of the action of *V. cholerae* enzyme and of viruses on the (Stone), 25, 137.
Blood cells, red, "T"-antigen of guinea-pig and human (Burnet and Anderson), 25, 213.
Blood cholesterol, influence of the thyrotrophic hormone on the, of intact and thyroidectomized rabbits fed cholesterol (Wright, Robinson and Trikojus), 22, 209.
Blood copper of sheep and of cows, studies on the (Beck), 19, 249.
Blood copper of sheep, effect of severe haemorrhage on the concentration of (Dick), 17, 271.
Blood groups of Australian aborigines (Cleland), 3, 33.
Blood groups of Central Australian aborigines, further results in (Cleland), 7, 79.
Blood pigment and cyanides; a green haemoglobin (Holden), 21, 159.
Blood pigment, effect of the ions of copper, zinc and mercury on the (Rawlinson), 16, 303.

Blood pigment, some effects of organic solvents on the (Holden and Setter), 15, 405.

Blood pressure, low, and secretory activity (Osborne), 5, 171.

Blood-pressure, systolic, optical method for measuring, in the intact rat (Byrom), 25, 351.

Blood sera, cholinesterase content of, from normal and myopathic subjects (Hicks and Mackay), 16, 39.

Blood serum, choline-esterase activity of, from two cases of myasthenia gravis (Hicks and MacKay), 14, 275.

Body fluids, estimation of sulphanilamides and other primary aromatic amines in (Fantl), 18, 175.

Boletus granulatus, sterol of (Marston), 1, 53.

Bone marrow, cultivation *in vitro* of normal and pathological guinea-pig, studies on the (Fastier), 24, 139.

Bones, chemical composition of the, of sheep in Western Australia (Underwood), 18, 405.

Boron, rôle of, in plant metabolism, *see* **Metabolism**, plant, rôle of boron in.

Botulism of sheep in Western Australia. Nutritional experiments 1 (Underwood and Shier), 14, 77.

Brain and heart, clotting in. Experimental study (Trethewie), 24, 185.

Brain, capillaries of the, mechanical obstruction of the (Hurst and Cooke), 20, 125.

Brain, respiratory enzyme systems of, in poisoning with cyanide and with azide (Wyndham), 19, 243.

Brains, capillary fat-embolism in the, of sheep, pigs and monkeys, with especial reference to demyelination and other lesions in the white matter (Hurst and Cooke), 21, 141.

Brushite ($CaHPO_4$, $2H_2O$) in dilute solutions of sodium chloride, nomogram for determining the solubility of (Lugg), 9, 231.

Caecum worm of fowls, *see* **Heterakis gallinae.**

Calandra oryzae *L.* (small strain) and *Rhizopertha dominica* Fab. (Coleoptera), effect of temperature and dryness on the survival of the eggs of (Birch), 22, 265.

Calandra oryzae L. and *Rhizopertha dominica* Fab. (Coleoptera), influence of temperature, humidity and density on the oviposition of the small strain of (Birch), 23, 197.

Calandra oryzae L. and *Rhizopertha dominica* Fab. (Coleoptera), influence of temperature on the development of the different stages of (Birch), 23, 29.

Calandra oryzae L. (small strain) and *Rhizopertha dominica* Fab., mortality of the immature stages of, in wheat of different moisture contents (Birch), 23, 141.

Calandra oryzae L., influence of food on the size of two strains of (Birch), 24, 123.

Calandra oryzae L. (Coleoptera), two strains of (Birch), 22, 271.

Calcium and potassium, drift of the content of, with age in plants (Petrie), 12, 99.

Calcium, distribution of, between blood plasma and erythrocytes (Thomas), 11, 109.

Calcium, volumetric micro-determination of, with methylene blue following its precipitation as calcium picrolonate (Bolliger), 13, 75.

Calcium content of the blood in relation to the menstrual cycle, alterations in the (Matters and Hübbe), 12, 19.

Calcium metabolism, *see* **Metabolism**, calcium.

Calculus, dental, factors affecting the deposition of (Smith), 7, 45.

Calculus, dental, rôle of enzyme action in the formation of (Adamson), 6, 215.

Calomel, electrolytic preparation of, for use in the calomel electrode (Pennycuick and Best), 3, 173.

Carbohydrate changes in the leaves of sclerophyll plants (Wood), 11, 139.

Carbohydrates in the leaves of grass plants, the effects of variation in nitrogen-supply and water content on the amounts of (Amos and Wood), 17, 285.

Carbon monoxide in air and blood, determination of small amounts of (Holden), 21, 9.

Carbon monoxide in blood, a micromethod for the determination of. The carbon monoxide content of normal blood (Bland), 18, 35.

Carbonic Acid, action of, on haemoglobin (Osborne), 3, 117.

Carboxylase, action of ether on yeast cell (Kerr and Young), 3, 187.

Cardiazol and coramin, action of, on the respiratory centre of man, a note on the comparison of (Hicks), 13, 261.

Cardio-depressor substance (acetylcholine?) released by dorsal nerve root stimulation (Tiegs), 12, 161.

Carotene and vitamin A, changes in the concentrations of, in the blood and liver of lambs with increase in age, and in the colostrum of ewes (Peirce), 25, 111.

Carotene and vitamin A, changes in the concentrations of, in the blood of sheep grazing on natural pastures in South Australia (Peirce), 24, 231.

Carotene, effect of intake of, on the general health and on the concentration of carotene and of vitamin A in the blood and liver of sheep (Peirce), 23, 295.
Carrot Tissue in buffer solutions, respiration of (Thomas), 8, 225.
Casein and native ox serum albumen, observations on mixtures of (Freeman), 12, 155.
Cat-flea, *see* **Ctenocephalides felis.**
Cattle in Gippsland, Victoria, occurrence of *Onchocerca gibsoni* (Worm Nodule) in (Woodruff), 4, 271.
Cattle, infected, observations on the larvae of *Onchocerca gibsoni* (Cleland and Johnston) in the skin of (Heydon), 4, 61.
Cattle Tick *Haemaphysalis bispinosa* act as the carrier of piroplasmosis (*Piroplasma bigeninum*)? (Legg), 3, 203.
Cell Processes, mechanism of the action of ethylene on (Nord), 14, 131.
Cell Processes, mechanism of the action of ethylene on (Shaw), 13, 95.
Cells, studies on large (Osterhout), 9, 135.
Cellular Degeneration of differentiated and undifferentiated tissues *in vitro*, cytological studies on (Horning and Richardson), 6, 229.
Cerebrospinal Fluids, paretic variations in the behaviour of, with different types of gold sols (Pennycuick, Woolcock and Cowan), 16, 315.
Cestode, amphilinid, from an Australian tortoise (Johnston), 8, 1.
Chaetomium globosum Kunze (Ascomycetes, Sphaeriales), morphological, inheritance and growth studies of the K saltation produced selectively by short wavelengths of ultra-violet irradiation in the fungus (Ford), 24, 241.
Characters, acquired, review of some experiments currently quoted as evidence of the inheritance of (Agar), 9, 179.
Chlorides, accumulation of, by plant cells, and its relation to respiration (Robertson), 19, 265.
Chlorine Ions, selective absorption by leaves of *Atriplex* (Wood), 2, 45.
Chlorophyll, protein-nitrogen and protein-sulphur in leaves of Sudan grass, relations between (Hanson, Barrien and Wood), 19, 231.
Chloroplast Protein, *see* **Protein**, chloroplast.
Cholesterol, blood, on a simplified method for the determination of (Day and Bolliger), 7, 41.
Cholesterol, influence of, upon multiplication of Infusoria (*Enchelys*) (Robertson), 2, 83.
Choline, acetyl, *see* **Acetylcholine.**
Choline Esterase in the body, investigation of the (Shaw), 13, 251.
Chorio-Allantoic Grafts of fragments of the two-day chick (Murray), 5, 237.
Circulation, mammalian, action on, of the skin secretion of *Hyla aurea* (Osborne), 7, 226.
Circulatory Defect, congenital, regulated oxygen transport in two cases of (Hicks and Cox), 15, 141.
Cl. acetobutylicum (Weizmann), bacteriology, growth factor requirements and fermentation reactions of (Rubbo, Maxwell, Fairbridge and Gillespie), 19, 185.
Cl. butyricum and *Azotobacter*, occurrence and activities of, in Victorian soils (Swaby), 17, 401.
Cl. oedematiens group and some other clostridia (*Cl botulinum C, Cl. tetani, Cl. septicum*), motile daughter colonies in the (Turner and Eales), 19, 167.
Cl oedematiens group, studies on the.
1. 'H' and 'O' antigenic analysis (Turner and Eales), 21, 79.
Cl. oedematiens infection, cultural reaction for the early diagnosis of (Nagler), 23, 59.
Cl. septique, toxin of, circulatory and other effects of the (Kellaway, Reid and Trethewie), 19, 297.
Cl. welchii toxins, modification of red-cell agglutinability by (McCrea), 25, 127.
Cl. welchii, type A, toxin of, tissue injury by the (Kellaway and Trethewie), 19, 17.
Cl. welchii, types B and C, toxins of, injury of tissue cells and the liberation of pharmacologically active substances by the (Kellaway and Trethewie), 19, 77.
Cl. welchii, type C, δ haemolysin of.
1. A characteristic haemolytic reaction of the *Cl. welchii*, type C on ruminant blood agar (Turner and Eales), 22, 215.
Cl. welchii, type D, epsilon toxin of.
1. Proteolytic conversion of epsilon prototoxin into epsilon toxin by trypsin and other proteases (Turner and Rodwell), 21, 17.
2. Mechanism of its development in cultures through the action of extracellular proteinases upon epsilon prototoxin (Turner and Rodwell), 21, 27.
Cl. welchii, type D toxin, detoxication of, by formaldehyde (Rodwell), 24, 63.
Cl. welchii, type D, toxin of, liberation of histamine and of adenyl compounds by (Kellaway, Trethewie and Turner), 18, 253.
Cl. welchii, type D, toxin of, neurotoxic and circulatory effects of (Kellaway, Trethewie and Turner), 18, 225.
Cobalt and iron, quantitative extraction of, from ashed biological material (Beck), 23, 311.
Cobalt in plant and animal tissues, the estimation of (Marston and Dewey), 18, 343.
Cobalt in solution, colorimetric estimation of, by means of nitroso-R-salt, a note on the (Lugg and Josland), 14, 319.

Cobra, *see* **Naia naia.**
Cobra Venom, *see* **Venom,** cobra.
Colloidal Emulsoids, critical mixtures of liquids considered as (Ostwald), 9, 83.
Complement Fixation Optimum, relationship of the, to the agglutination optimum (Platt), 14, 101.
Concrete, corrosion of.

1. The isolation of a species of bacterium associated with the corrosion of concrete exposed to atmospheres containing hydrogen sulphide (Parker), 23, 81.
2. The function of *Thiobacillus concretivorus* (nov. spec.) in the corrosion of concrete exposed to atmospheres containing hydrogen sulphide (Parker), 23, 91.

Conductivity Water, acid reaction and CO_2 content of (Best), 6, 107.
Copper-deficient Oat Plants, development and metabolism of (Wood and Womersley), 24, 79.
Copper Ions, reactions of, with haemoglobin, oxyhaemoglobin and methaemoglobin, further studies on the (Rawlinson), 17, 53.
Copperhead Snake, *see* **Denisonia superba.**
Coramin and cardiazol, action of, on the respiratory centre of man, a note on the comparison of (Hicks), 13, 261.
Cortex, excitable, in the Monotremata (Abbie), 16, 143.
Corynebacterium equi in pigs, occurrence in Australia of, note on the (McDonald), 20, 27.
Cow, rôle of the, in the transmission of human infection in Q fever (Derrick, Smith and Brown), 20, 105.
Cows, urine of, chemical composition of (Dann), 11, 53.
Creatine, function in muscular contraction (Tiegs), 2, 1.
Creatinine in diabetic blood, note on the estimation of (Rudd), 8, 203.
Cruoralbin and its prosthetic group (Holden), 23, 255.
Cruoratin, some properties of, and its relationship to pseudo-haematin (Holden), 24, 107.
Crustacea, application of serological methods to the study of the (Clark and Burnet), 20, 89.
Ctenocephalides felis, failure to transmit Q fever with the cat-flea (Smith), 18, 119.
Culture Media containing agar, new method for the preparation of bacteriological (Grace), 4, 269.
Cystine, estimation of, by Sullivan's method, observations on the (Lee), 13, 229.
Cystine in diet of growing rats, substitution of methionine for (Dawbarn), 16, 159.
Cystine in diet of mice, substitution of taurine for (Mitchell), 1, 5.
Cystine, supposed cleavage of, from casein by dilute alkali, a note on the (Lee), 13, 229.
Cystinuria, cystine, methionine and sulphate excretion in (Cleland), 23, 273; 24, 219; 25, 33.

Death and disease (Gay), 9, 113.
Death Adder, *see* **Acanthophis antarcticus.**
Denisonia maculata, venom of the ornamented snake (Kellaway), 12, 47.
Denisonia superba, circulatory and pulmonary effects of the venom of the Australian copperhead (Feldberg and Kellaway), 15, 81.
Denisonia superba, haemolysin of, further studies on the (Holden), 13, 103.
Denisonia superba, vaso-depressant action of the venom of (Kellaway and LeMessurier), 14, 57.
Denisonia superba, venom of, some factors which influence the action of the (Holden), 12, 55.
Dermatomycosis of the sheep (lumpy or matted wool) due to *Actinomyces dermatonomus* (n. sp.) (Bull), 6, 301.
Diabetes, alloxan, in the sheep (Jarrett), 24, 95.
Diabetic Blood, estimation of creatinine in, note on the (Rudd), 8, 203.
Diastase, blood and urinary, of the opossum, influence of the liver and the pancreas on the (Anderson), 16, 127.
Diastase in the opossum (*Trichosurus vulpecula*) (Anderson), 16, 117.
Dieback, *see* **Rose Wilt.**
Diet deficient in tryptophane, effect on sensitisation of mice to ultra-violet light by (Dawbarn), 1, 73.
Diet of some Australian schoolboys (Wardlaw, White, Fisher and Wake), 18, 9.
Diet, synthetic, growth and maintenance of white mice fed upon (Dawbarn), 5, 149.
Diphtheria, faucial, spreading power of some bacteria associated with *C. diphtheriae* (Wilson), 17, 393.
Diphtheria Antitoxin, low grade, septicaemia and the adrenal gland (Bourne), 13, 133.
Diphtheria Infection, influence of metals on (Petherick and Singer), 21, 221.
Diphtheria Toxin, detoxication of (Petherick and Singer), 22, 285.
Diphtheria Toxin, natural resistance against (Singer), 23, 165.
Disease and death (Gay), 9, 113.
'Distemper, nervous', *see* **'Nervous Distemper.'**
Duboisia hopwoodii, alkaloid of: chemistry of d-nor-nicotine, further observations on the (Hicks), 14, 39.

Duboisia hopwoodii, alkaloids of, chemistry and pharmacology of, preliminary observations on the (Hicks and LeMessurier), 13, 175.
Dyes, effect of, on bacterial growth (Burnet), 2, 77.

E. coli, reduction of nitrate, nitrite and hydroxylamine by (Lascelles and Still), 24, 159.
Echidna aculeata, urine and blood of, observations on the composition of the (Mitchell), 8, 237.
Echidna aculeata multi-aculeata, milk of the monotrene (Marston), 3, 217.
Echidnophaga myrmecobii Rothschild, notes on the life history and artificial breeding of the Australian "stickfast" flea (Mules), 18, 385.
Ectromelia, infectious, in mice, studies in.
1. Immunization of mice against ectromelia with living vaccinia virus (Fenner), 25, 257.
2. Natural transmission: the portal of entry of the virus (Fenner), 25, 275.
3. Natural transmission: elimination of the virus (Fenner), 25, 327.

Edestin, crystalline, observations on the specific rotation of (Freeman), 12, 187.
Egg Passage Virus, titration of, by the pock-counting method (Burnet), 14, 241.
Egg Shell, note on the permeability of (Osborne), 8, 239.
Egg Virus, 'neutralization' of, by immune sera (Burnet), 14, 247.
Eggs, 'floating yolk' in, investigations into the nature of the condition known as (Platt), 14, 107.
Eggs, insect, speed of development of, at constant temperatures (Davidson), 20, 233.
Eggs, mustiness in, caused by *Achromobacter perolens* (n. sp.) (Turner), 4, 57.
Electric Currents of extremely short duration, stimulating effect of (Lippay), 22, 157 .
Electrode, calomel (Pennyeuick and Best), 3, 173.
Electrode, glass, use of the, in the biological laboratory (Holden), 16, 193.
Electrode, hydrogen, convenient (Lewis), 3, 189.
Electrode, hydrogen, vessel, useful for solutions of high resistance, a type of (Best), 5, 233.
Encephalitis, acute, (X-disease) at Broken Hill, probable successful transmission to sheep (Kneebone and Cleland), 3, 119.
Encephalopathy produced by potassium cyanide (Hurst), 18, 201.
Endowment by Sir Joseph Verco, 3, 115.
Enzymes, action of radiations on (Collier and Wasteneys), 9, 89.
Enzymes of the hydatid cyst, note on (Cameron), 3, 11.
Erysipelothrix, study of some Australian strains of (Atkinson), 19, 45.
Erythrocytes, *see* **Blood Cells**, red.
Ethylene, mechanism of the action of, on cell processes (Nord), 14, 131.
Ethylene, mechanism of the action of, on cell processes (Shaw), 13, 95.
3, 3'-**Ethylidene-Bis** (4-hydroxy coumarin), action of, as a blood anti-coagulant (Fantl), 22, 125.
Ewe, Merino, milk of the, further observations on the (Peirce), 14, 187.
Ewe, Merino, milk of the, yield and composition of the (Peirce), 12, 7.
Eye Worm of Australian poultry, transmission of, preliminary note on the (Fielding), 3, 225.
Eye Worm of poultry, development of the, additional observations on the (Fielding), 5, 1.
Eye Worm of poultry, life history of the, further observations on the (Fielding), 4, 273.

Fasciola hepatica (liver fluke), anaphylactic experiments with extracts of (Kellaway), 5, 273.
Fat-Solvents, action of, on alcoholic fermentation (Kerr and Young), 3, 177.
Fermentation, alcoholic, action of certain fat-solvents on (Kerr and Young), 3, 177.
Fermentation, alcoholic, by yeast cells, mechanism of the Pasteur effect in (Gottschalk), 19, 211.
Fertilizers, phosphatic, stimulating effect of, on azofication in South Australian soils (Lewcock), 2, 127.
Feulgen's Reaction as a critical stain for wheat cytology, a note on the use of (Gurney), 11, 157.
Fibrinogen, clotting of, thiol-vitamin K mechanism in the (Lyons), 23, 131.
Fibrinolysin, staphylococcal (Christie, Graydon and Woods), 23, 127.
Fibrinolysis, staphylococcal, test of (Christie and Wilson), 19, 329.
Filaria bancrofti, transmission of, in Queensland (Walker), 1, 39.
Fish, ash constituents of Australian (Clements and Hutchinson), 17 ,89.
Fish Liver Oils, *see* **Oils**, fish liver.
Flax Plant, studies of the.
1. Physiology of growth, stem anatomy and fibre development in fibre flax (Tiver), 20, 149.
2. The effect of artificial drought on growth and oil production in a linseed variety (Tiver and Williams), 21, 201.

Flea, "stickfast," *see* **Echidnophaga myrmecobii** Rothschild.
"Flour Beetle," *see* **Tribolium confusum.**

Fluorescent Substance present in plants, studies on a.
1. Production of the substance as a result of virus infection and some applications of the phenomena (Best), 14, 199.
2. Isolation of the substance in a pure state and its identification as 6-methoxy-7-hydroxy 1:2 benzo-pyrone (Best), 22, 251.

Foot-Rot in sheep, study of *Spirochaeta penortha* (n. sp.) isolated from (Beveridge), 14, 307.

Fortuitous Distribution, Law of, applicability of, to individual variations in weight of animals of same generation (Robertson and Ray), 2, 91.

Fowls, caecum worm of *see* **Heterakis gallinae.**

Frankliniella insularis Franklin (Thysanoptera), sex determination in (Davidson and Bald), 8, 139.

Fructo-Furanose, proportion of, present in d-fructose solution at equilibrium (0° C.) (Gottschalk), 21, 139.

d-Fructo-Furanose, kinetics of fermentation of, by yeast (Gottschalk), 22, 291.

d-Fructo-Pyranose, sugar unfermentable by yeast (Gottschalk), 21, 133.

Fructose, influence of, on the utilization of glucose by isolated muscle (Corkill and Nelson), 25, 347.

Fructose, influence of, upon the peripheral utilization of glucose (Corkill and Nelson), 18, 171.

Fructose, metabolism of, concerning the (Corkill and Nelson), 17, 205.

Fungi, antibacterial activity, *see* **Antibacterial Activity.**

Ganglia of Auerbach's plexus, structure of the neurone junctions in (Tiegs), 4, 79.

Ganglia, sympathetic, structure of the neurome junctions in (Tiegs), 4, 79.

Gases, micro-analysis of, with a description of a new apparatus for use in a dry method of analysis for carbon dioxide and oxygen (Gilmour), 16, 209.

Giardia in sheep in Victoria, Australia (Turner and Murnane), 10, 53.

Globin, anaphylactic experiments with (Holden), 5, 285.

Globin and denatured globin (Holden and Freeman), 5, 213.

Globin and haemoglobin, action of picric acid on (Bolliger and Goulston), 13, 23.

Globin, denatured, the combination of, with haematin and with proto-porphyrin (Holden), 16, 153.

Globin, natural and denatured, iso-electric point and constants of dissociation of (Laporta), 9, 69.

Gluconeogenesis and the energy material of muscle (Macleod), 9, 119.

Glucose, formation by the liver, influence of metal ions on (Fantl and Rome), 22, 45.

Glucose, formation in the liver, factors controlling (Fantl, Rome and Nelson), 20, 121.

Glucose, influence of fructose upon the peripheral utilisation of (Corkill and Nelson), 18, 171.

Glucose, utilisation of, by isolated muscle, influence of fructose on the (Corkill and Nelson), 25, 347.

Glutathione in tissue extracts, manometric estimation of (Ennor), 17, 157.

Glutathione in tissues, influence of anterior pituitary extracts on the content and rate of oxidation of (Ennor), 17, 173.

Glutathione in tissues, influence of anterior pituitary extracts upon the rate of oxidation and reduction of (Ennor and Anderson), 19, 69.

Glutathione, reduced, a note on the estimation of (Corkill and Nelson), 16, 133.

Glycine hispida, *see* **Soya Bean.**

Glycogen breakdown in the liver, concerning (Fantl, Anderson and Nelson), 18, 369.

Glycogen in oysters, determination of (Humphrey), 19, 311.

Glycogen, liver, after partial pancreatectomy in the guinea-pig (Splatt), 4, 213.

Glycolase and its preservation, investigations into (Neuberg and Kobel), 9, 127.

Glycolysis in extracts of oyster muscle (Humphrey), 22, 135.

Gold, colloidal, for the Lange reaction: a method of preparation (Bartholomew and Gent), 18, 89.

Gold Sols, rapid estimation of the gold content of (Pennycuick and Woolcock), 15, 423.

Golgi Apparatus, mitochondria and vitamins (Bourne), 13, 239.

Golgi Apparatus of the adrenal gland, a study on the (Bourne), 12, 123.

Golgi Bodies of a coelenterate, studies on the (Horning), 5, 257.

Grasshopper, *see* **Austroicetes cruciata.**

Gravity, centre of, of the human body, a new method for determining the (Fantl and Osborne), 14, 117.

Gravity, centre of, changes, studies in.
1. A new method for finding the height of the centre of gravity in man, with some applications (Cotton), 8, 53.
2. A new method for determining the antero-posterior position of the centre of gravity in man by the use of the centre of gravity balance-table (Cotton), 10, 17.
3. An investigation of the sex difference in respiration, by measurement of the respiratory variation in the centre of gravity (Cotton), 10, 97.

4. On the measurement of the "blood-shift" to the active muscles in staircase running by means of the centre of gravity balance-table (Cotton), 10, 225.
5. On the "blood shift" produced by graded compression of the thighs (Cotton), 13, 197.

Growth, and longevity of the white mouse, experiments on the.
1. The influence of injections of thorium oleate in oleic acid, and of oleic acid alone, on growth and longevity (Robertson, Dawbarn, Thomas, Walters and Wilson), 11, 99.
2. The influence of the continuous administration of vegetable nucleic acid and the intermittent administration of thyroid upon growth and longevity (Robertson, Dawbarn, Walters and Wilson), 11, 219.

Growth and longevity of the white mouse, influence of intermittent starvation, and of intermittent starvation plus nucleic acid on the (Robertson, Marston and Walters), 12, 33.

Growth and longevity of the white mouse, influence of nucleic acids of various origin upon the (Robertson), 5, 47.

Growth and longevity of the white mouse, influence of thyroid alone and of thyroid administered together with nucleic acids upon the (Robertson). 5, 69.

Growth and maintenance of white mice fed upon synthetic diets (Dawbarn), 5, 149.

Growth, curves of, proper method of graphically representing (Robertson and Ray), 2, 91.

Growth of the plant and its parts, the effect of nitrogen supply on the (Ballard and Petrie), 14, 135.

Growth of the plant and its parts, the effect of phosphorus supply on the (Williams), 14, 165.

Growth of the white mouse, experiments on the influence of tethelin upon (Robertson and Ray), 2, 173.

Growth Rate and longevity of the white mouse, the effects of moderate overdosage of vitamin D and of vitamins A and D on the (Robertson, Marston, Dawbarn, Walters and Wilson), 9, 203.

Growth Rate and longevity of the white mouse, part 2 (Robretson, Marston, Dawbarn, Walters and Wilson), 11, 49.

Guanidine, colorimetric method for estimation of (Marston), 1, 99.

Guanidine, distinction between, and its methyl derivatives (Marston), 2, 57.

Guanidine Bases, colour test for, and physiological applications (Tiegs), 1, 93.

Guanine, colorimetric method of estimating, and its application to the determination of nucleo-cytoplasmic ratios (First communication), (Robertson), 6, 33.

Haemagglutination by viruses. Range of susceptible cells with special reference to agglutination by vaccinia virus (Clark and Nagler), 21, 103.

Haemagglutinin, production of vaccinia, in rabbit skin (Stone and Burnet), 24, 9.

Haemagglutinins, inactivation of vaccinia and ectromelia virus, by lecithinase (Stone), 24, 191.

Haemagglutinins, lipid (Stone), 24, 197.

Haemagglutinins of vaccinia and ectromelia viruses (Burnet and Stone), 24, 1.

Haemaphysalis bispinosa (cattle tick), act as the carrier of piroplasmosis (*Piroplasma bigeminum*)? (Legg), 3, 203.

Haemaphysalis bispinosa, experimental infection of the tick with *Rickettsia burneti* (Smith), 20, 295.

Haemaphysalis humerosa, isolation of six strains of *Rickettsia burneti* from the tick (Smith and Derrick), 18, 1.

Haemaphysalis humerosa, transmission of Q fever by the tick (Smith), 18, 103.

Haemaphysalis humerosa, Warburton and Nuttall (Acarina, Ixodidae) in Queensland, biology of (Smith), 19, 73.

Haemin, variation of magnetic susceptibility of, in various solvents (Rawlinson), 18, 185.

Haemochromogen and some related compounds (Holden and Freeman), 6, 79.

Haemocyanin, crystalline: some physical and chemical constants (Rawlinson), 18, 131.

Haemocyanin, effect of oxidizing agents on (Rawlinson), 19, 137.

Haemoglobin, action of carbonic acid on (Osborne), 3, 117.

Haemoglobin and globin, action of picric acid on (Bolliger and Goulston), 13, 23.

Haemoglobin and some of its derivatives, absorption of ultra-violet radiation by (Holden and Hicks), 10, 219.

Haemoglobin, denaturation of (Holden), 15, 43.

Haemoglobin, determination of, as globin picrate (Bolliger), 14, 97.

Haemoglobin, determination of, colorimetric (Holden), 25, 57.

Haemoglobin, photochemical oxidation of (Lennox), 13, 193.

Haemoglobin, relation between some reversible reactions of, and the formation of green derivatives (Holden), 25, 47.

Haemolysins, staphylococcal, and staphylococcal lipase, observations on (Christie and Graydon), 19, 9.

Haemolysis and liberation of histamine by two Australian snake venoms, comparison of (Trethewie), 17, 145.

Haemolysis by Australian snake venoms.
1. (Kellaway and Williams), 11, 75.
2. (Kellaway and Williams), 11, 81.
3. (Holden), 12, 55.
4. (Holden), 13, 103.

Haemolysis of blood agar by staphylococci, distant punctate (Burnet), 5, 205.

Haemonchus contortus of sheep and cattle, the host specificity of (Clunies Ross), 8, 217.

Haemophilus influenzae, serological study of.

Note. First paper of this series was published in the Journal of Hygiene, 1937, 37, 98.

2. Two serologically active protein fractions isolated from Pfeiffer's bacillus (Platt), 17, 19.

Haemophilus pertussis phase 1, virulence of, some factors influencing the (Gray), 24, 301.

Hair, straight and wavy, supposed distinction of Australian aboriginals (Tiegs), 4, 31.

"Halo Blight" of beans, *see* **Beans, "halo blight."**

Halogens, action of, on influenza virus, with special reference to the action of iodine vapour on virus mists (Stone and Burnet), 23, 205.

Halotydeus destructor (Tucker), Acarina fam. Penthaleidae, experiments on the effects of temperature and humidity on the survival of (Solomon), 15, 1.

Halotydeus destructor Tucker (Acarina), incubation period of the eggs of, at different temperatures (Davidson and Swan), 21, 107.

Heart and brain, clotting in. Experimental study (Trethewie), 24, 185.

Heavy Water, influence of, on plants (Ewart), 13, 9.

Heparine evaluation (Trethewie and Melvin), 23, 241.

Hepatitis, infectious necrotic, of sheep in Victoria (Albiston), 4, 113.

Herpes skin test reagent from amniotic fluid (Nagler), 24, 103.

Herpes Virus, *see* **Virus**, herpes.

Heterakis gallinae (Gmelin, 1790, Freeborn, 1923) caecum worm of fowls, studies on the life history and economic importance of (Roberts), 15, 429.

Hexoestrol, effect of, on the food intake of sheep (Austin, Whitten, Franklin and Reid), 25, 343.

Hirst Haemagglutination Reaction with influenza and Newcastle disease viruses, studies on the (Burnet, Beveridge, McEwin and Boake), 23, 177.

Histamine and acetylcholine, experiments on the problem of 'free' and 'bound' (Trethewie), 16, 225.

Histamine and adenyl compounds, liberation of, by the toxin of *Cl. welchii* type D (Kellaway, Trethewie and Turner), 18, 253.

Histamine, liberation of, and its rôle in the symptomatology of bee venom poisoning (Feldberg and Kellaway), 15, 461.

Histamine, liberation of, by staphylococcal toxin and mercuric chloride (Feldberg and Kellaway), 16, 249.

Histamine, liberation of, by two Australian snake venoms; comparison of haemolysis and (Trethewie), 17, 145.

Histamine, photodynamic action and the liberation of (Kellaway and Trethewie), 17, 61.

Histamine, tissue injury by radiant energy and the liberation of (Kellaway, Holden and Trethewie), 16, 331.

Histamine Content of the lungs, effect of histidine on the, and on histamine reactions (Mackay), 16, 137.

Histamine, *see also* **Leukaemia.**

Histidine, effect of, on the histamine content of the lungs and on histamine reactions (Mackay), 16, 137.

Hops, disease of, in Tasmania, and an account of a protomyxean organism, *Leptomyxa reticulata* Goodey var. *humuli* (nov. var.), associated with it (McLennan), 8, 9.

Hormone, cortical, effects of splenectomy, adrenalectomy and injections of (Anderson), 15, 24.

Hormone, thyrotrophic, effect of adrenalectomy on the responses of the guinea-pig to injections of (with estimations of liver glycogen and ascorbic acid) (Robinson and Trikojus), 25, 61.

Hormone, thyrotrophic, influence of the, on the blood cholesterol of intact and thyroidectomized rabbits fed cholesterol (Wright, Robinson and Trikojus), 22, 209.

Host-Parasite Relations, physiology of, studies in the.

Note. Papers 1, 2 and 3 of this series appeared in the Proceedings of the Royal Society of Victoria.

4. Some effects of tomato spotted wilt on growth (Grieve), 21, 89.

How Technique for the micro-estimation of arsenic, notes on the (Wilkinson and Greenham), 18, 341.

Hydatid Antigens (Bryce, Kellaway and Williams), 1, 77.

Hydatid Antigens, filterability of (Kellaway, Fairley and Williams), 5, 189.

Hydatid Cyst, enzymes of, note on (Cameron), 3, 11.

Hydatid Scolices, toxity of certain drugs for, *in vitro* tests of the (Clunies Ross), 4, 283.

Hydrogen Peroxide and bacterial growth (Burnet), 2, 65.

Hydrolysis, influence of, on capacity of proteins to bind acids and bases (Robertson), 1, 31.

Hydroxy-Naphthaquinones and the colouring-matter of *Drosera whittakeri*, the absorption spectra of (Beck, Macbeth and Winzor), 12, 203.

Hyla aurea, skin secretion of, the action on mammalian circulation of the (Osborne), 7, 226.
2. (Osborne), 15, 63.

Hyperchlorhydria, urinary pH and alveolar carbon dioxide tension changes in a case of (Hicks), 8, 133.

Hypericin and a non-fluorescent photosensitive pigment from St. John's wort (*Hypericum perforatum*), (Betty and Trikojus), 21, 175.

Hyperindicanaemia, experimental, and its relation to uraemia (Earlam and Bolliger), 8, 209.

Hypertrophy, renal, compensatory (Cameron and Kellaway), 4, 155.

Infection, intracellular oxidases in (Singer), 23, 41.

Influenza A and B viruses, isolation of, by chick-embryo inoculations (Beveridge, Burnet and Williams), 22, 1.

Influenza A, sporadic and minor epidemic incidence of, in Victoria, 1945–46.
1. Phase behaviour of influenza A strains in relation to epidemic characteristics (Anderson and Burnet), 25, 235.
2. The breadth of antibody response following influenza A infection (Anderson), 25, 243.

Influenza A Virus, O–D change in, further studies on the (Burnet and Stone), 23, 151.

Influenza Antibodies, modified Salk test for *in vitro* titration of (Anderson, Burnet and Stone), 24, 269.

Influenza B infection, serological response to, in human beings; differentiation of specific and nonspecific type reactions (Burnet and Stone), 24, 207.

Influenza B virus isolated by chick-embryo inoculation, study of a strain of (Burnet, Beveridge and Bull), 22, 9.

Influenza Haemagglutination, nonspecific serum inhibition of (McCrea), 24, 283.

Influenza Virus, action of halogens on, with special reference to the action of iodine vapour on virus mists (Stone and Burnet), 23, 205.

Influenza Virus antibody reaction, characteristics of the, as tested by the method of allantoic inoculation (Burnet), 21, 231.

Influenza Virus, changes in, associated with adaptation to passage in chick embryos (Burnet and Bull), 21, 55.

Influenza Virus group, affinity of Newcastle disease virus to the (Burnet), 20, 81.

Influenza Virus group, reaction between red cells and. Studies with Newcastle disease viruses (Anderson), 25, 163.

Influenza Virus, growth of, in the allantoic cavity of the chick embryo (Burnet), 19, 291.

Influenza Virus, lack of increase in antibody after second injection of, in man (Beveridge), 22, 301.

Influenza Virus, method for the isolation of, from throat washings without filtration (Burnet and Stone), 23, 161.

Influenza Virus on the developing egg.
Note. The first paper of this series was published in the British journal of experimental Pathology, 1936, 17, 282.
2. Titration of egg passage virus by the pock-counting method (Burnet), 14, 241.
3. The "neutralization" of egg virus by immune sera (Burnet), 14, 247.
5. Differentiation of two antigenic types of human influenza virus (Burnet), 15, 369.
6. Complement fixation with egg membrane antigens (Lush and Burnet), 15, 375.
8. Comparison of two antigenically dissimilar strains of human influenza virus after full adaptation to the egg membrane (Burnet and Lush), 16, 261.

Influenza Virus, significance of primary isolation of, by inoculation of mice or of the allantoic cavity of chick embryos (Burnet and Stone), 23, 147.

Influenza Virus strain, inhibitory and inactivating action of normal ferret sera against an (Burnet and McCrea), 24, 277.

Influenza Virus strain "Melbourne egg", re-examination of the (Burnet and Bull), 22, 173.

Influenza Virus strains isolated from the Melbourne 1939 epidemic (Burnet and Lush), 18, 49.

Influenza Virus, suppression of antigenicity of, by admixture with homologous antiserum (Beveridge, Stone and Lind), 22. 307.

Influenza Virus Infections, comparison with infections of the respiratory tract of chick embryos by the viruses of psittacosis and infectious laryngotracheitis (Burnet and Foley), 19, 235.

Influenza Virus Infections of chick embryo by the amniotic route.
1. General character of the infections (Burnet), 18, 353.
2. Titrations and serum neutralization tests (Burnet), 19, 39.
3. Changes in the activity of influenza virus on continued amniotic passage (Burnet and Foley), 19, 101.

Influenza Virus Infections of cynomolgus monkeys (Burnet), 19, 281.

Influenza Viruses, effect of the temperature of preliminary incubation on susceptibility of the chick embryo to (Beveridge), 22, 169.
Influenza Viruses, titration of antibody against, by allantoic inoculation of the developing chick embryo (Burnet and Beveridge), 21, 71.
Infusoria, conditions affecting the viability of cultures of (Robertson), 4, 1.
Infusoria, isolated, influence of washing upon multiplication of (Robertson), 1, 151.
Infusoria, multiplication of, influence of certain dyes upon (Robertson), 2, 21.
Infusoria, orientation of mitochondria in the surface cytoplasm of (Horning), 4, 187.
Infusoria (*Enchelys*), influence of cholesterol and oxycholesterol upon multiplication of (Robertson), 2, 83.
Infusoria Cultures, factors determining duration of period of lag in (Robertson), 1, 105.
Infusoria Cultures initially containing two, influence of washing upon allelocatalytic effect in (Robertson), 1, 151.
Inheritance, morphological and growth studies of the K saltation produced selectively by short wavelengths of ultra-violet irradiation in the fungus *Chaetomium globosum* Kunze (Ascomycetes, Sphaeriales), (Ford), 24, 241.
Insect Eggs, rate of development of, improved method for determining the influence of temperature on the, (using eggs of the small strain of *Calandra oryzae* L. (Coleoptera) (Birch), 22, 277.
Insect Populations, growth of, with successive generations (Davidson), 22, 95.
Insulin, inactivation, by sulphydryl compounds (Corkill, Ennor and Nelson), 20, 15.
Insulin, influence of sulphydryl compounds upon the action of (Corkill and Ennor), 18, 379.
Insulin, preparation and standardization of (Cheadle), 1, 121.
Insulin subjected to high temperatures, effect of hydrogen-ion concentration on activity of (Cheadle), 1, 129.
Insulin Hypoglycaemia in mice, effect of phloridzin on mortality from (Anderson), 1, 1.
Intelligence and trial and error in behaviour of anthropods (Agar), 2, 151.
Intestinal Exchanges following the injection of water or sodium salts (O'Connor), 16, 85.
Intoxication, bacterial, *see* **Bacterial Intoxication.**
Iodine Percentage and dry weight of the thyroid glands of sheep in South Australia, seasonal variation in the (Dawbarn), 6, 65.
Ions, intake of, by the plant, and its relation to the respiration of the root (Petrie), 11, 25.
Iminazole and some of its derivatives, the absorption of ultra-violet light by (Hicks and Holden), 10, 49.
Iron and cobalt, quantitative extraction of, from ashed biological material (Beck), 23, 311.
Ischaemia, anoxaemia and shock (Trethewie), 25, 291.
Ixodes holocyclus, transmission of Q fever by the tick; with notes on tick-paralysis in bandicoots (Smith), 20, 213.

Keratin Fibres, structure and elasticity of the cortex of: an electron microscope study (Mercer and Rees), 24, 175.
Keto-Steroids and **Oestrogens**, excretion of, in the urine of sheep, some observations on the (Whitten), 21, 187.
Kidney of the rat, effect of a polyuria upon (Hicks and Mitchell), 3, 221.

Law of Fortuitous Distribution, *see* **Fortuitous Distribution, Law of.**
Law of Mass Action, *see* **Mass Action, Law of.**
Lead, colloidal, preparation of (Penny-cuick and Scott), 5, 95.
Leaves, starving, metabolism of, *see* **Metabolism** of starving leaves.
Legume Seed, proteins, tyrosine and tryptophane contents of some (Clowes), 23, 227.
Legume Seeds, proteins of some, partial amino-acid compositions of the: tyrosine, tryptophane, cystine (plus cysteine) and methionine contents (Lugg and Clowes), 23, 75.
Legumes, sulphur present in the seeds of certain, with special reference to the cystine plus cysteine and methionine contents of the proteins (Lugg and Weller), 22, 149.
Leptomyxa reticulata Goodey, var. **humuli** (nov. var.) associated with a disease of hops in Tasmania (McLennan), 8, 9.
Leukaemia, chronic myeloid, of man, histamine and histaminase in.
1. Histamine in the blood of chronic myeloid leukaemia (Thiersch), 25, 73.
Leukaemia, lymphoid and monocytic, histamine and histaminase in the blood of cases of (Thiersch), 25, 79.
Leukaemia of man and of mice, attempts to transmit, to the chick embryo and to the young chick by the amniotic and intravenous routes (Thiersch), 22, 57.
Limb Buds of the four-day chick, grafts of longitudinal halves of (Selby and Murray), 5, 181.

Limbs, Intestine, Skin, development of, from chorio-allantoic grafts of fragments of the two-day chick (Murray), 5, 237.
Lipase, staphylococcal, and staphylococcal haemolysins, observations on (Christie and Graydon), 19, 9.
Lipoid in mitochrondria, function of (Robertson), 3, 97.
Lipoid Emulsions, acceleration of enzymatic synthesis of proteins by (Marston), 3, 233.
Liver Aldehydrase (Lemberg, Wyndham and Henry), 14, 259.
Liver Extracts, dephosphorylation in (Fantl and Rome), 23, 21.
Liver Fluke, *see* **Fasciola hepatica.**
Liver, glucose formation by the, influence of metal ions on (Fantl and Rome), 22, 45.
Liver, glucose formatioin in the, factors controlling (Fantl, Rome and Nelson), 20, 121.
Liver Glycogen, influence of adrenal cortical and sex hormones on (Corkill and Nelson), 19, 241.
Liver Lipoids, iodine numbers of the, in experimental liver damage (Ennor), 20, 205.
Liver Pulp, breakdown of hexose monophosphates in (Fantl and Anderson), 19, 117.
Livers, fatty, oxygen consumption and ketone body production in the carbon tetrachloride and phosphorus (Ennor), 20, 73.
Longevity of the white mouse, experiments on the influence of tethelin upon (Robertson and Ray), 2, 173.
Longevity, *see also* **Growth** and longevity.
Louping Ill Virus, *see* **Virus**, louping ill.
Lucerne (*Medicago sativa*), dried, vitamin C content of; chemical and biological assays (Dawbarn), 23, 289.
Lucilia cuprina Wied, occurrence of a white-eyed mutant race of, note on (Mackerras), 11, 45.
Lungs, histamine content of, *see* **Histamine Content** of the lungs.
Luteinisation, adrenal cortex and (Hicks and Matters), 13, 27.
Lyperosia exigua De Meijere (Diptera, Muscidae) temperature - development curve of, in relation to the probable distribution of this insect in Australia (Davidson), 15, 113.

Macrophyllida antarctica (Hughes), anatomy of the trematode (Johnston), 7, 101.
Maize, mixed sterols of, simple laboratory preparation of the (Holden), 20, 103.
Maize, xantha seedlings in, inheritance and linkage relations of (Gurney), 7, 215.
Malaria, vector of, *Anopheles annulipes* Walk. as a possible, observations on (Roberts), 21, 259.
Manganese, distribution of, in plants, and its importance in plant metabolism (Bishop), 5, 125.
Marmor tabaci, *see* **Tobacco Mosaic.**
Mass Action, Law of, application to the coagulation of colloidal platinum (Pennycuick), 4, 99.
Meat, refrigeration of, studies on.
1. (Cook, Love, Vickery and Young), 3, 15.
2. (Vickery), 3, 81.

Medicago sativa, *see* **Lucerne.**
"Melbourne Egg," *see* **Influenza Virus**, strain "Melbourne egg".
Melophagus ovinus, transmission by, of non-pathogenic *Trypanosoma melophagium* in the blood of Victorian sheep (Turner and Murnane), 7, 5.
Membranes, polarized, permeability in relation to the permeability of the nucleus and . . . amino-acids in proteins (Robertson), 3, 105.
Menstrual Cycle, alterations in the calcium content of the blood in relation to the (Matters and Hübbe), 12, 19.
Menstruation, influence of, on gaseous metabolism (Matters), 6, 133.
Merino Ewe, *see* **Ewe, Merino.**
Merino Sheep, *see* **Sheep, Merino.**
Metabolism, bacterial and animal, origin of acetaldehyde in (Whetham), 4, 35.
Metabolism, basal, discussion on methods of determining (Hindmarsh), 4, 225.
Metabolism, basal, of Australian aborigines, further observations on the (Wardlaw and Lawrence), 10, 157.
Metabolism, basal, of man on a diet rich in nucleic acid (Hicks), 4, 151.
Metabolism, basal, of some Australian aborigines (Wardlaw and Horsley). 5, 263.
Metabolism, basal, rate of, of students in Sydney, N.S.W., with a discussion on methods of determining basal metabolism (Hindmarsh), 4, 225.
Metabolism, calcium, in the human female, a study of (Matters), 6, 119.
Metabolism, energy, and insensible respiration of Australian aborigines (Wardlaw, Davies and Joseph), 12, 63.
Metabolism, gaseous, influence of menstruation on (Matters), 6, 133.
Metabolism, nitrogen, of leaves of *Atriplex nummularium* (Wood), 11, 237.
Metabolism, nitrogen, of plants, studies on the.

Note. Papers 1–4 appeared in the Annals of Botany, 1938 and 1941.
5. The relation of carbohydrate content to protein synthesis in leaves (Wood and Petrie), 20, 249.

6. Interrelations among respiration rate, carbohydrates, soluble nitrogen compounds and proteins in leaves (Wood), 20, 257.

Metabolism of carbohydrate, protein and organic acids in leaves and respiration rate, relations between (Wood), 19, 313.

Metabolism of plant cells, studies in the.

1. Accumulation of chlorides by plant cells and its relation to respiration (Robertson), 19, 265.
2. Effects of temperature on accumulation of potassium chloride and on respiration (Robertson), 22, 237.
3. The effects of cyanide on the accumulation of potassium chloride and on respiration; the nature of the salt respiration (Robertson and Turner), 23, 63.
4. Reversibility of the salt respiration (Robertson and Thorn), 23, 305.
5. Salt respiration and accumulation in red beet tissue (Robertson, Turner and Wilkins), 25, 1.

Metabolism of starving leaves.

1. Presentation of data; the nature of respiration rate/time curves in air and in nitrogen and the relation to carbohydrates (Wood, Cruikshank and Kuchel), 21, 37.
2. Changes in amounts of total and chloroplast proteins, chlorophyll, ascorbic acids and soluble nitrogen compounds (Wood, Cruikshank and Kuchel), 21, 37.
3. Changes in malic and citric acid contents and inter-relations of these with soluble nitrogen compounds (Wood, Cruikshank and Kuchel), 21, 37.
4. Respiration rate and metabolism of leaves of Kikuyu grass during air-nitrogen transfers (Wood, Mercer and Pedlow), 22, 37.
5. Changes in amounts of some amino acids during starvation of grass leaves; and their bearing on the nature of the relationship between proteins and amino acids (Wood and Cruickshank), 22, 111.
6. Nitrogen balance sheet and changes in organic acid content during starvation of oat leaves (Cruickshank and Wood), 23, 243.

Metabolism, plant, importance of manganese in (Bishop), 5, 125.

Metabolism, plant, rôle of boron in.

1. Boron in relation to the absorption and solubility of calcium (Smith), 22, 257.
2. Rôle of boron in plant metabolism (Winfield), 23, 111.
3. The influence of boron on certain enzyme systems (Winfield), 23, 267.

Metabolism, respiratory, of carrot tissue.

Note. Papers I and II of this series appeared in the New Phytologist, vol. 37, 1938, pp. 232, 289.

3. The drift of respiration and fermentation in tissue slices, with notes on the respiratory quotient (Turner), 18, 273.
4. Oxidative anabolism (Turner), 18, 273.

Metabolism, salt and water, of nephrectomised rabbits.

1. Effect of the injection of water or glucose solutions (O'Connor), 15, 97.
2. Effect of injection of sodium chloride and bicarbonate (O'Connor), 15, 205.
3. Intestinal exchanges following the injection of water or sodium salts (O'Connor), 16, 85.

Metabolism, standard, of Australian aboriginals (Hicks, Matters and Mitchell), 8, 69.

Metabolism, standard, of Australian aborigines (Hicks and Matters), 11, 177.

Metal Ions, influence of, on glucose formation by the liver (Fantl and Rome), 22, 45.

Metallo-Porphyrins, *see* **Porphyrins,** metallo-.

Metals, action of, on bacterial intoxication (Petherick and Singer), 22, 21.

Methaemoglobin, decomposition of, by hydrogen peroxide (Holden), 25, 355.

Methaemoglobin, spectrophotometric study (Holden), 14, 291.

Methionine, substitution of, for cystine in the diet of growing rats (Dąwbarn), 16, 159.

Methylguanidine, colorimetric method for estimation of (Marston), 1, 99.

Micro-Baly Tube for absorption spectrum analysis, a simple (Hicks), 8, 199.

Micro-Kjeldahl, method for, note on a (Young), 6, 315.

Micro-Organisms of the Tertiary red sands near Melbourne, Victoria (Dixon), 7, 161.

Microscope, adjustable flexion tube (Penfold), 1, 191.

Milk, cow's, alkaline culture medium for differentiation of staphylococci and micrococci from (Beveridge), 18, 391.

Milk of Australian women (Wardlaw and Dart), 3, 129.

Milk of merino ewe, further observations on the (Peirce), 14, 187.

Milk of merino ewe, yield and composition of the (Peirce), 12, 7.

Milk of monotreme, *Echidna aculeata multiaculeata* (Marston), 3, 217.

Milk of sheep and of cows, copper content of the, studies on the (Beck), 19, 145.

Mitochondria, behaviour during life cycle of *Nyctotherus cordiformis* (Horning), 4, 69.

Mitochondria, function of the lipoid in (Robertson), 3, 97.

Mitochondria, Golgi apparatus and vitamins (Bourne), 13, 239.

Mitochondria, observations on (Horning), 3, 149.

Mitochondria of Paramoecium, studies on (Horning), 3, 89.

Mitochondria of a protozoan (*Opalina*) and their behaviour during the life cycle (Horning), 2, 167.

Mitochondria, orientation of, in the surface cytoplasm of infusorians (Horning), 4, 187.

Mitochondria, relation of, to the nucleus (Horning), 4, 75.

Mitochondria, studies on (Horning), 6, 11.

Mitochondria within the living cell, studies on the behaviour of (Horning), 5, 143.

Mollusca, Australian marine, sterol fraction of (Fantl), 20, 55.

Molybdenum, determination of, in plant and in animal tissue (Dick and Bingley), 25, 193.

Monoaza-Haemins, transformation of verdohaemochromogens into (Lemberg), 21, 239.

Mould Mounts, simple techniques for the preparation of (Skerman), 24, 319.

Moulds, antibacterial substances produced by, *see* **Antibacterial Substances.**

Movement, amoeboid, surface tension changes which underlie (Tiegs), 3, 1.

Movement, muscular, surface tension, changes which underlie (Tiegs), 3, 1.

Movements, automatic rhythmic, relation to nerve net of plain muscle (Tiegs), 2, 157.

Mucinase and tissue disintegrating enzymes, characterization of (Burnet and Stone), 25, 219.

Muller's Phenomenon, observations on (Burnet), 5, 205.

Mumps.

1. Isolation and cultivation of the virus in the chick embryo (Beveridge, Lind and Anderson), 24, 15.
2. Virus haemagglutination and serological reactions (Beveridge and Lind), 24, 127.
3. Immunization experiments in man (Beveridge and Lind), 25, 337.

Mus norvegicus (black-hooded rat), note on the maturation of the female (Matters and MacKay), 12, 151.

Muscle, gluconegenesis and the energy material of (Macleod), 9, 119.

Muscle, plain, studies on (Tiegs), 1, 131.

Muscle, reaction of, to denervation in cold-blooded animals (Reid), 19, 199.

Muscle, skeletal, after denervation, change in the adenyl content of (Reid), 20, 197.

Muscle, skeletal, fasciculation and fibrillation in, some observations on; with special reference to the action of novocain on the neuromuscular mechanism (Reid), 20, 189.

Muscle, skeletal, influence of the sympathetic nerves on (Coates and Tiegs), 5, 9.

Muscle, skeletal, of the extremities, directly innervated by sympathetic nerves? (Coates and Tiegs), 8, 99.

Muscle stimulating substance in serum, pharmacological inter-relations of the (Reid), 24, 327.

Muscle Extract, breakdown of commercial starches by (Fantl and Rome), 20, 187.

Muscle Tissue, isolated, influence of thyroxin administration and of thyroidectomy on the respiration of (Hicks), 10, 113.

Muscles, denervated mammalian, experiments on. Stimulating effect of electric currents of extremely short duration (Lippay and Scott), 25, 103.

Muscles, heat production of, during activity, the effect of doing work on the (Tiegs), 1, 47.

Muscular Action, on the mechanism of (Tiegs), 1, 11.

Muscular Contraction, function of creatine in (Tiegs), 2, 1.

Muscular Receptivity, experiment on (Osborne), 1, 175.

Musculature, striated, in python, the innervation of the (Tiegs), 9, 191.

Mussel Poison, action of, on the nervous system (Kellaway), 13, 79.

Mutton Bird Oil, *see* **Oil**, mutton bird.

Myasthenia Gravis, choline-esterase activity of blood serum from two cases of (Hicks and MacKay), 14, 275.

Myxoma and the Shope fibroma.

Note. Papers 1–3 were published in the Britsih Journal of experimental Pathology, 1937, vol. 18.

4. Histology of the Shope fibroma (Hurst), 16, 53.
5. Myxoma in the fibroma-immune rabbit, with a summary of present knowledge of the relationship between myxoma and fibroma viruses (Hurst), 16, 205.

Myxoma, infectious, and experimental cholesterol-atheromatosis of the rabbit (Thiersch), 18, 57.

Myxoma Virus, serological relationship of, and Shope's fibroma virus (Lush), 17, 85.

Myxomatosis, route of transmission of the virus of infectious, of rabbits, to the central nervous system (Swan), 19, 113.

Myxomatosis, virus of infectious, of rabbits, on the chorio-allantoic membrane of the developing egg (Lush), 15, 131.

Naia naia (Indian cobra), circulatory effects of the venom of, in cats (Feldberg and Kellaway), 15, 159.

Naia naia (Indian cobra), circulatory effects of the venom of, in dogs (Feldberg and Kellaway), 15, 441.

Nephritis, experimental, source of protein in the albuminuria of (Kellaway, Davies and Williams), 2, 139.

Nerve, accommodation of, in myasthenia gravis and in partial curarization (Stratmann, Wright and Reid), 24, 313.

Nerve Cell, neurofibril structure of the (abstract), (Tiegs), 6, 111.

Nerve Fibres, axons of, electrolytes in the, and their significance (Macallum), 9, 159.

Nerve Fibres, myelinated, within nerve bundles, a note on the distribution of (Kilvington), 18, 367.

Nerves of plain muscle, relation to automatic rhythmic movements (Tiegs), 2, 157.

Nerves, splanchnic, chemical mediation of impulses in certain fibres of the (Rudd and Kinross), 14, 193.

Nerves, sympathetic, directly innervate skeletal muscles of the extremities? (Coates and Tiegs), 8, 99.

Nerves, sympathetic, effects of, on skeletal muscle, further observations on certain alleged (Coates and Tiegs), 7, 37.

Nerves, sympathetic, influence of the, on skeletal muscle (Coates and Tiegs), 5, 9.

"Nervous Distemper" in dogs. Pathological and experimental study, with some reference to demyelinating diseases in general (Hurst, Cooke and Melvin), 21. 115.

Nervous System, action of mussel poison on the (Kellaway), 13, 79.

Nervous System, central, experimental demyelination of the.

1. The encephalopathy produced by potassium cyanide (Hurst), 18, 201.
2. Respiratory enzyme systems of the brain in poisoning with cyanide and with azide (Wyndham), 19, 243.
3. Poisoning with potassium cyanide, sodium azide, hydroxylamine, narcotics, carbon monoxide, etc., with some consideration of bilateral necrosis occurring in the basal nuclei (Hurst), 20, 297.

Nervous System, central, infection of the, by louping ill virus (Burnet and Lush), 16, 233.

Nervous System, central, poisoning with potassium cyanide, sodium azide, hydroxylamine, narcotics, carbon monoxide, etc, with some consideration of bilateral necrosis occurring in the basal nuclei (Hurst), 20, 297.

Nervous System, routes of entry into, of viruses introduced into the bloodstream. Experiments with the viruses of pseudorabies, herpes and infectious myxomatosis (Cooke, Hurst and Swan), 20, 129.

Nessler-Folin Reagent, modified, note on (Walters), 7, 113.

Neuritis and beri beri (Woollard), 9, 173.

Neuromuscular Mechanism, action of novocain on the (Reid), 20, 189.

Neurone as unit of conduction of the nervous system, inadequacy of the conception of the (Tiegs), 3, 45.

Neurone Junctions in sympathetic ganglia, and in the ganglia of Auerbach's plexus, structure of the (Tiegs), 4, 79.

Neurone Junctions of the spinal cord, structure of the (Tiegs), 3, 69.

Neurone Junctions of the spinal cord, structure of, further note on the (Tiegs), 4, 25.

Newcastle Disease Virus, affinity of, to the influenza virus group (Burnet), 20, 81.

Nicotine and nornicotine, physico-chemical study of (Sinclair and Hicks), 25, 187.

Nicotine and nornicotine, toxicities of the optical isomers of (Hicks and Sinclair), 25, 82.

Nicotinic Acid, effect of, on the growth of the testes and seminal vesicles in immature male rats, a note on the (Hawker), 24, 251.

Nitrate, nitrite and hydroxylamine, reduction of, by *E. coli* (Lascelles and Still), 24, 159.

Nitro Compounds, aromatic, metabolism of.

1. Estimation of diazotisable amines in rats' and human urine after intake of 2.4.6-trinitrotoluene (Lemberg and Callaghan), 23, 1.
2. Excretion of diazotisable amines in the urine after intake of T.N.T. and of reduction products of T.N.T. (Lemberg and Callaghan), 23, 6.
3. Isolation of reduction products of 2.4.6-trinitrotoluene from the urine of rats and from human beings (Lemberg and Callaghan), 23, 13.

Nitrogen, colorimetric estimation of, by "direct Nesslerization" (Walters), 7, 113.

Nitrogen Metabolism, *see* **Metabolism**, nitrogen.

d-Nor-Nicotine, alkaloid of *Duboisia hopwoodii*, further observations on the chemistry of (Hicks), 14, 39.

d-Nor-Nicotine in *Duboisia hopwoodii*, preliminary observations on the chemistry and pharmacology of (Hicks and Le Messurier), 13, 175.

Nor-Nicotines, comparative pharmacology of the (Hicks, Mackay and Sinclair), 25, 363.

Notechis scutatus (tiger snake) and *Notechis scutatus* var. *niger* (black tiger snake), venoms of (Holden), 11, 1.
Notechis scutatus (tiger snake) and the black tiger snake, *Notechis scutatus* var. *niger*, antigenic differences between the venoms of (Kellaway and Williams), 13, 17.
Notechis scutatus, results of the excision of the venom glands of the Australian tiger snake (Kellaway), 15, 121.
Notechis scutatus, venom of a melanotic insular variety of the tiger snake, observations on (Kellaway and Thomson), 10, 35.
Novocain, action of, on the neuromuscular mechanism (Reid), 20, 189.
Nuclear Inclusions developing in the kidneys of Australian opossums maintained under laboratory conditions (Hurst, Cooke, Mawson and Melvin), 21, 149.
Nucleic Acid and coagulable nitrogen content of the tissues of sheep, preliminary communication on the influence of the age of the animal upon the (Robertson and Dawbarn), 6, 261.
Nucleic Acid, basal metabolism of man on a diet rich in (Hicks), 4, 151.
Nucleic Acid, vegetable, influence of the continuous administration of, upon growth and longevity of the white mouse (Robertson, Dawbarn, Walters and Wilson), 11, 219.
Nucleic-Acid Phosphorus in plant material, estimation of (Williams), 23, 213.
Nucleic Acids of animal and vegetable origin, comparison of the utilization of (Robertson, Hicks and Marston), 4, 125.
Nucleic Acids of various origin, influence of, upon the growth and longevity of the white mouse (Robertson), 5, 47.
Nucleo-Cytoplasmic Ratio in plant tissues, preliminary study upon the (Huelin), 6, 59.
Nucleo-Cytoplasmic Ratio of the white mouse and its variation with age (Dawbarn), 9, 213.
Nucleo-Cytoplasmic Ratios, determination of (Robertson), 6, 33.
Nucleus in amoeba, some physiological functions of the, investigated by micrurgical methods (Clark), 21, 215.
Nucleus, permeability (Robertson), 3, 105.
Nucleus, relation of mitochondria to the (Horning), 4, 75.
Nucleus, removing the, from amoeba, some effects of (Clark), 20, 241.
Nutrition, relation to physiological ontogeny in plants, see **Ontogeny**, physiological.

O-Nitrophenols, compounds of proteins with (Bolliger), 13, 189.
Obituary Notice of Hunter, John Irvine, 2, 61.
Obituary Notice of Robertson, Thorburn Brailsford, 7, 1.
Oedema, relationship between alkali reserve and the production of, in the rabbit (Cox and Hicks), 11, 119.
Oestrogens and **Keto-Steroids**, excretion of, in the urine of sheep, some observations on the (Whitten), 21, 187.
Oestrus Cycle, effect of thyroid feeding on, of guinea-pig and mouse (Cameron and Amies), 3, 37.
Oil, mutton bird, vitamin A and vitamin D contents of (Davies), 17, 81.
Oils, fish liver, vitamin A and vitamin D content of some Australian (Cunningham and Slater), 17, 457.
Oleic Acid alone, influence of injections of, on growth and longevity of the white mouse (Robertson, Dawbarn, Thomas, Walters and Wilson), 11, 99.
Onchocerca gibsoni, occurrence of, in cattle in Gippsland, Victoria (Woodruff), 4, 271.
Onchocerca gibsoni (Cleland and Johnston), larvae of, in the skin of infected cattle, observations on the (Heydon), 4, 61.
Ontogeny, physiological, in plants, and its relation to nutrition.
1. The effect of nitrogen supply in the growth of the plant and its parts (Ballard and Petrie), 14, 135.
2. The effect of phosphorus supply on the growth of the plant and its parts (Williams), 14, 165.
3. Effect of nitrogen supply on the drifting composition of the leaves (Petrie), 15, 385.
4. Effect of phosphorus supply on the total-, protein- and soluble-nitrogen contents, and water content of the leaves and other plant parts (Williams), 16, 65.
5. Effect of nitrogen and phosphorus supplies on the respiration rate of the leaves (Petrie and Williams), 16, 347.
6. Analysis of the unit leaf rate (Williams), 17, 123.

Ontogeny, physiological, in the tobacco plant, *see* **Tobacco Plant**.
Opossum (*Trichosurus vulpecula*), studies on the.
1. Blood analyses and lipoid glandular constituents in normal and lactating opossums (Anderson), 15, 17.
2. The effects of splenectomy, adrenalectomy and injections of cortical hormone (Anderson), 15, 24.

Organ Specificity (Davies, Kellaway and Williams), 2, 117.
Ornithodorus Sp., experimental infection of the tick, with *Rickettsia burneti* (Smith), 20, 295.
Ornithorhynchus anatinus, *see* **Platypus**.

Ox Serum, proteins of, observations on the (Holden and Freeman), 11, 185.
Ox Serum Albumin, native, and casein, mixtures of, observations on (Freeman), 12, 155.
Oxidases, intracellular, in infection (Singer), 23, 41.
Oxycholesterol, influence of, upon multiplication of Infusoria (*Enchelys*) (Robertson), 2, 83.
Oxygen-Carbon Dioxide Exchange of a silverfish (Lindsay), 17, 365.
Oxyhaemoglobin and some of its derivatives, absorption of ultra-violet light by (Hicks and Holden), 6, 175.
Oxyhaemoglobin, colorimetric determination of, a method for the (Holden), 21, 169.
Oxyhaemoglobin Solutions, acidified, oxidizing effects of (Lemberg), 20, 111.
Oxyuranus maclennani, venom of (Kellaway and Williams), 6, 155.
Oysters, glycogen in, determination of (Humphrey), 19, 311.

Pancreas, secretion, histological observations on (Horning), 2, 135.
Paralysis induced by the intranasal inoculation of poliomyelitis virus, effect of faradic stimulation on the localization of (Swan), 19, 143.
Paramoecium, mitochondria of, studies on (Horning), 3, 89.
Paramoecium caudatum, oxygen consumption of, effect of cyanide and carbon monoxide on the (Clark), 23, 317.
Penicidin, activity, detection and occurrence of suppressors of (Atkinson and Stanley), 21, 249.
Penicidin, product of the growth of a penicillium (Atkinson), 20, 287.
Penicidin, production of crystalline (Atkinson, Sheppard, Stanley and Melvin), 22, 223.
Penicidin suppressors, mechanism of the action of some (Atkinson and Stanley), 21, 255.
Penicillia, common, antibacterial substances produced by some (Atkinson), 21, 15.
Penicillin, effect of, on staphylococcal bacteriophages (Rountree), 25, 9.
Penicillium and aspergillus, activity of a further group of Australian strains of (Atkinson, Sheppard, Stanley and Rainsford), 22, 227.
Peptones (Rudd), 1, 187.
Pertussis, experimental, in the monkey (*Macaca mulatta*) (North, Keogh, Christie and Anderson), 18, 125.
Pertussis, experimental, passive immunity in (North, Keogh, Anderson and Williams), 17, 275.
Pertussis, experimental, passive immunization by the intranasal route in (North), 24, 253.
Pertussis Endotoxin, relation of, to pertussis immunity in the mouse (Anderson and North), 21, 1.
Pfeiffer's Bacillus, *see* **Bacillus**, Pfeiffer's.
pH, urinary, and alveolar carbon dioxide tension changes in a case of hyperchlorhydria (Hicks), 8, 133.
Phage, *see* **Bacteriophage**.
Phenothiazine, examination of the urine of sheep dosed with (Lipson), 18, 269.
Phloridzin, effect of, on mortality from insulin hypoglycaemia in mice (Anderson), 1, 1.
Phosgene Poisoning, treatment of, with thymoxyethyldiethylamine (Trethewie), 25, 323.
Phosphates, inorganic, threshold for the renal excretion of, in the sheep (Watson), 11, 197.
Phosphorus in the blood of merino sheep on pasture, the concentration and distribution of (Watson), 11, 253.
Phosphorus in the saliva of sheep, observations on the secretion of (Watson), 11, 67.
Phosphorus Supply, analysis of the effect of, on transpiration ratio in plants (Williams), 13, 49.
Phosphorus Supply, effect of, on the total-, protein-, and soluble-nitrogen contents and water content of the leaves and other plant parts (Williams), 16, 65.
Photosynthesis, relation between water content and amount of (Wood), 6, 127.
Phytomonas medicaginis phaseolicola Burk, "smooth rough" variation in (Adam and Pugsley), 12, 193.
Pica in sheep in botulism areas of Western Australia, further experiments on the incidence and control of (Underwood, Beck and Shier), 17, 183.
Picric Acid, action of, on globin and haemoglobin (Bolliger and Goulston), 13, 23.
Pigs, *Corynebacterium equi* in, note on the occurrence in Australia of (McDonald), 20, 27.
Pituitary, anterior, extracts, anti-insulin action of (Nelson), 22, 131.
Pituitary, anterior, extracts, influence of, on the detoxication mechanisms of the dog (Ennor), 18, 163.
Pituitary, anterior, extracts, influence of, upon the rate of oxidation and reduction of glutathione in tissues (Ennor and Anderson), 19, 69.
Pituitary Gland, anterior, hormonal antigens of the, studies on the (Singer), 19, 125.
Pituitrin, effect of, on the water balance of rabbits (Cox and Hicks), 11, 288.
Plant Metabolism, *see* **Metabolism**, plant.

Plant Virus, *see* **Virus**, plant and **Viruses**, plant.
Plants, sclerophyll, carbohydrate changes in the leaves of (Wood), 11, 139.
Plasma Coagulation Mechanism, influence of quinine hydrochloride on the (Fantl, Rome and Nance), 25, 183.
Plasma Coagulation Time, relation between, and prothrombin concentration (Fantl and Nance), 25, 95.
Plasma Volume determination, effect of morphine on dye concentration curves for, in dogs (Doutch and Nelson), 24, 143.
Platinum, colloidal, coagulation of, application of Whetham's law and the law of mass action to (Pennycuick), 4, 99.
Platypus (*Ornithorhynchus anatinus*), venom of the (Kellaway and LeMessurier), 13, 205.
Pleuro-Pneumonia Contagiosa Boum: staining of causal organisms in the specific lesions (Turner), 13, 149.
Pneumonia, chemo-pathology of, in cats (Trethewie), 23, 47.
Pneumonia, liberation of deaminating enzyme in (Trethewie), 20, 289.
Pneumonic Lung, diluted blood perfusion of the (Trethewie), 23, 103.
Poliomyelitis.
1. Intraocular inoculation as a standard method for the demonstration of neutralizing antibodies (Burnet, Jackson and Robertson), 17, 253.
2. The significance of neutralizing antibodies in human sera (Burnet and Jackson), 17, 261.
3. The use of *Macacus cynomolgus* as an experimental animal (Burnet, Jackson and Robertson), 17, 375.
4. The spread of poliomyelitis virus in cynomolgus monkeys with particular reference to infection by the pharyngeal-intestinal route (Burnet and Jackson), 18, 361.

Poliomyelitis, anatomical distribution and character of the lesions of; with special reference to the type of cell affected and to portal of entry of the virus (Swan), 17, 345.
Poliomyelitis, epidemiology of, vitamin C nutrition and susceptibility to diphtheria as possible factors in the (Heaslip), 16, 287.
Poliomyelitis, experimental.
1. The effect of faradic stimulation on the localization of paralysis induced by the intranasal inoculation of poliomyelitis virus (Swan), 19, 143.
2. Failure to transmit the disease to Jerboa mice (*Notomys mitchelli*), rats (*Rattus norvegicus*) and phalangers (*Trichosurus vulpecula*) (Swan), 20, 31.

Poliomyelitis, experimental, a case of relapse in (Heaslip), 16, 285.
Polynuclear Count in the Australian aborigine (Maegraith), 16, 241.
Polypeptides (Rudd), 1, 187.
Polysaccharides, synthesis of, by yeast cells fermenting anaerobically glucose, fructose or mannose (Gottschalk), 20, 201.
Polyuria, effect of a continued, upon the kidney of the rat (Hicks and Mitchell), 3, 221.
Porphyrins, combination with proteins of certain (Holden), 15, 409.
Porphyrins, metallo-, and their compounds with globin, ultra-violet absorption spectra of some (Holden), 19, 1.
Potassium and calcium, drift of the content of, with age in plants (Petrie), 12, 99.
Potassium as potassium acid tartrate in biological material, volumetric microdetermination of (Bolliger), 12, 75.
Potassium in the urine, titration method for the determination of (Bolliger and Day), 6, 91.
Potassium, overdosage, experimental observations upon thirst and on (Arden), 12, 121.
Poultry, Australian, transmission of the eye worm of, preliminary note on (Fielding), 3, 225.
Preisz-Nocard Bacillus, *see* **Bacillus**, Preisz-Nocard.
Pressure, venous, systemic (Osborne), 6, 97.
"**Primitive Cell**," identity of (Hill), 7, 211.
Propylene Glycol Aerosol, fungicidal action of, and its use as an aid to pure culture technique (Wade), 25, 179.
Protein, chloroplast, a note on the metabolism of (Hanson), 19, 157.
Protein, source of, in albuminuria of experimental nephritis (Kellaway, Davies and Williams), 2, 139.
Protein-Nitrogen, protein-sulphur and chlorophyll in leaves of Sudan grass, relations between (Hanson, Barrien and Wood), 19, 231.
Protein Tungstate precipitates from unlaked blood, filtration of (Wardlaw), 10, 61.
Proteins, acceleration of enzymatic synthesis of, by lipoidal emulsions (Marston), 3, 233.
Proteins and protein derivatives, action of dilute formaldehyde solution on (Freeman), 7, 117.
Proteins, combination with, of certain porphyrins (Holden), 15, 409.
Proteins, compounds of, with o-nitrophenols (Bolliger), 13, 189.
Proteins, denatured, experiments on (Holden and Freeman), 7, 13.

Proteins, denatured, ultra-violet absorption spectra of certain (Hicks and Holden), 12, 91.
Proteins in solution, determination of, note on the (Bick), 14, 305.
Proteins, influence of hydrolysis upon capacity to bind acids and bases (Robertson), 1, 31.
Proteins of some legume seeds, partial amino-acid compositions of the: the tyrosine, tryptophane, cystine (plus cysteine) and methionine contents (Lugg and Clowes), 23, 75.
Proteins, relations between colloids and changes in constitution of some (Pauli), 9, 23.
Proteoses (Rudd), 1, 187.
Proteoses from egg albumin, separation of (Rudd), 1, 179.
Prothrombin System, efficiency of the human (Fantl), 23, 123.
Protoporphyrin, cobalt compounds of (Holden), 19, 89.
Protozoa (*Opalina*), mitochondria of, and their behaviour during the life cycle (Horning), 2, 167.
Pseudechis australis (Gray), venom of a large Australian snake, observations on the.
1. Synonymy (Thomson), 7, 125.
2. The venom yields and venom (Kellaway and Thomson), 7, 134.

Pseuchechis porphyriacus (black snake), venom of (Holden), 11, 1.
Pseudechis scutellatus, venom of (Kellaway and Williams), 6, 155.
Pseudorabies Virus, *see* **Virus**, pseudorabies.
Psittacosis, intranasal infection of mice with the virus of (Rudd and Burnet), 19, 33.
Psittacosis-Like Organism, spontaneous infection of laboratory mice with a (De Burgh, Jackson and Williams), 23, 107.
Psittacosis Virus, growth of, in the allantoic cavity of the developing egg (Williams), 22, 205.
Pulse Rate, studies in relation to the (Cotton), 5, 101, 111.
Pythium Root Rot of broad beans in Victoria (Cheney), 10, 143.

Q Fever, epidemiology of, studies in the.
1. The isolation of six strains of *Rickettsia burneti* from the tick *Haemaphysalis humerosa* (Smith and Derrick), 18, 1.
2. The isolation of three strains of *Rickettsia burneti* from the bandicoot *Isoodon torosus* (Derrick and Smith), 18, 99.
3. The transmission of Q fever by the tick *Haemaphysalis humerosa* (Smith), 18, 103.
4. The failure to transmit Q fever with the cat-flea *Ctenocephalides felis* (Smith), 18, 119.
5. Surveys of human and animal sera for *Rickettsia burneti* agglutinins (Freeman), 18, 193.
6. The susceptibility of various animals (Derrick, Smith and Brown), 18, 409.
7. The biology of *Haemaphysalis humerosa* Warburton and Nuttall (Acarina, Ixodidae) in Queensland (Smith), 19, 73.
8. The transmission of Q fever by the tick *Rhipicephalus sanguineus* (Smith), 19, 133.
9. The rôle of the cow in the transmission of human infection (Derrick, Smith and Brown), 20, 105.
10. The transmission of Q fever by the tick *Ixodes holocyclus* (with notes on tick-paralysis in bandicoots) (Smith), 20, 213.
11. Experimental infection of the ticks *Haemaphysalis bispinosa* and *Ornithodorus* sp. with *Rickettsia burneti* (Smith), 20, 295.

Q Fever, susceptibility of the dog to (Derrick, Johnson, Smith and Brown), 16, 245.
Q Fever, tissue culture of the rickettsia of (Burnet), 16, 219.
Quinine alkaloids and other antimalarials, mode of action of (Keogh and Shaw), 22, 139.
Quinine Hydrochloride, influence of, on the plasma coagulation mechanism (Fantl, Rome and Nance), 25, 183.
Quinoline Group, ultra-violet absorption spectra of the (Hicks), 7, 171.

Radiant Energy, tissue injury by, and the liberation of histamine (Kellaway, Holden and Trethewie), 16, 331.
Rat, black-hooded, *see* **Mus norvegicus.**
Refrigeration of meat, studies on.
1. (Cook, Love, Vickery and Young), 3, 15.
2. (Vickery), 3, 81.

Renal Insufficiency, creatine retention in experimental (Bolliger and Carrodus), 15, 201.
Resistance, natural, studies on.
1. The relative resistance of guinea-pigs and mice to diphtheria toxin (Petherick), 20, 263.

Respiration, endogenous, of homogenates of oyster muscle (Humphrey), 24, 261.
Respiration, insensible, and energy metabolism of Australian aborigines (Wardlaw, Davies and Joseph), 12, 63.
Respiration (plant), effects of temperature on accumulation of potassium chloride and on (Robertson), 22, 237.

Respiration, studies in.

1. A simple method for the investigation of fractional samples of expired air (Cotton), 17, 425.
2. On the occurrence of an apparently paradoxical rise in the oxygen percentage of increasingly deeper samples of alveolar air (Cotton), 17, 433.
3. The effect of respiratory speed on the depth of the oxygen trough of progressive expiration (Cotton), 18, 393.
4. The effect of varying the time of apnoea on the occurrence and extent of the oxygen trough of respiration (Cotton), 19, 107.

Respiration Rate and metabolism of carbohydrate, protein and organic acids in leaves, relations between (Wood), 19, 313.

Respiration Rate of the leaves, effect of nitrogen and phosphorus supplies on the (Petrie and Williams), 16, 347.

Respiratory Exchange of the Australian aborigine (Hicks, Moore and Eldridge), 12, 79.

Respiratory Tract, infections of, of chick embryos by the viruses of psittacosis and infectious laryngotracheitis. A comparison with influenza virus infections (Burnet and Foley), 19, 235.

Respirometer, constant-pressure; designed for use with medium volumes of yeast suspension (Gottschalk and Rawlinson), 20, 169.

Rh Factor, immunology of the, some aspects of the (de Burgh, Sanger and Walsh), 24, 293.

Rhipicephalus sanguineus, transmission of Q fever by the tick (Smith), 19, 133.

Rhizopertha dominica Fab. and *Calandra oryzae* L. (small strain), (Coleoptera), effect of temperature and dryness on the survival of the eggs of (Birch), 22, 265.

Rhizopertha dominica Fab. and *Calandra oryzae* L. (small strain) (Coleoptera), influence of temperature, humidity and density on the oviposition of (Birch), 23, 197.

Rhizopertha dominica Fab. and *Calandra oryzae* L. (Coleoptera), influence of temperature on the development of the different stages of (Birch), 23, 29.

Rhizopertha dominica Fab. and *Calandra oryzae* L. (small strain), mortality of the immature stages of, in wheat of different moisture contents (Birch), 23, 141.

Rhizopertha dominica Fab. (Coleoptera), development of the eggs of, at constant temperatures (Birch and Snowball), 23, 37.

Riboflavin and thiamin, urinary excretion of, relation between urinary volume and the, of a man fed on a constant diet (Francis and Slater), 23, 119.

Riboflavin, application of a recent modification of the fluorometric method of determining, to some samples of Australian wheat and wheat products (Morell), 25, 251.

Riboflavin content of urine, effect of storage on the (Slater and Morell), 24, 121.

Riboflavin, effect of thiamine deficiency on the urinary excretion and liver content of, in the rat (Kratzing), 25, 157.

Rickettsia burneti agglutinins, surveys of human and animal sera for (Freeman), 18, 193.

Rickettsia burneti, experimental infection of the ticks *Haemaphysalis bispinosa* and *Ornithodorus* sp. with (Smith), 20, 295.

Rickettsia burneti, isolation of six strains of, from the tick *Haemaphysalis humerosa* (Smith and Derrick), 18, 1.

Rickettsia burneti, isolation of three strains of, from the bandicoot *Isoodon torosus* (Derrick and Smith), 18, 99.

Rickettsia-like Organism in the lymphocytes of sheep, on the presence of a (Gordon), 11, 95.

Rickettsiae, survival of, in cell-free media, experiments on the (Singer), 19, 123.

Rickettsiae, *see also* **Q Fever.**

Robertson, Thorburn Brailsford: bibliography (Dawbarn), 9, 7.

Robertson, Thorburn Brailsford: biographical note (Marston), 9, 1.

Root, respiration of the, intake of ions by the plant and its relation to the (Petrie), 11, 25.

"Rose Wilt" and "dieback": virus disease of roses occurring in Australia (Grieve), 8, 107.

Rye x Wheat Hybrids of the 5th and 6th generation, the cytology of (Gurney), 11, 123.

Rye, cytology of (Gurney), 8, 241.

Salicylates, effect of (A) on the estimation of thiamine by the thiochrome method, (B) on the excretion of thiamine (Cleland), 21, 153.

Salmonella types in Australia, occurrence of.

1. (Atkinson and Woodroofe), 22, 51.
2, 3, (Atkinson, Woodroofe and Macbeth), 22, 201; 25, 25.

Salmonella adelaide: a new Salmonella type (Atkinson), 21, 171.

Salmonella gallinarum and *Salmonella pullorum,* comparative studies of (Dumaresq), 16, 361.

Salmonella pullorum and *Salmonella gallinarum,* comparative studies of (Dumaresq), 16, 361.

Salt, excretion of, by the human kidney (Arden), 12, 111.

Salt Action, balanced, as manifested in bacteriophage phenomena (Burnet and McKie), 7, 183.

Salt and Water Metabolism, *see* **Metabolism**, salt and water.
Salt Contents of the blood of aquatic animals, regulation of the, and the problem of the permeability of the bounding membranes of aquatic invertebrates (Dakin and Edmonds), 8, 169.
Salt Optima in agglutination (Platt), 16, 275.
Salt Respiration and accumulation in red beet tissue (Robertson, Turner and Wilkins), 25, 1.
Salts, unequal intake of the ions of, by plants, effect of temperature on the (Petrie), 4, 169.
Sarcoma, Lumsden rat, *in vitro*, cytological observations of a (Horning and Richardson), 6, 143.
Sarcoma, mouse, cultivated *in vitro*, effect of embryonic and various glandular extracts upon the growth of a: a cytological study (Horning and Byrne), 6, 1.
Sclerophyll Plants, *see* **Plants**, sclerophyll.
Secretion and low blood pressure (Osborne), 5, 171.
Seeds, germinating, as a source of vitamin C in human nutrition, *see* **Vitamin C.**
Septicaemia, adrenal gland, and low grade diphtheria antitoxin (Bourne), 13, 133.
Serum, ox, *see* **Ox Serum.**
Serum, pharmacologically active substances in (Reid and Bick), 20, 33.
Sex Ratio, alteration of, in the "flour beetle" *Tribolium confusum* Duval, following starvation of newly hatched larvae (Holdaway and Smith), 11, 35.
Sexual Cycle of the guinea pig, some mechanisms in the (Loeb), 9, 141.
Sheep, alloxan diabetes in the (Jarrett), 24, 95.
Sheep, biochemical data on the blood and urine of, in the botulism areas of Western Australia (Underwood, Harvey and Beck), 17, 193.
Sheep, bones of, chemical composition of the, in Western Australia (Underwood), 18, 405.
Sheep, botulism of, in Western Australia: nutritional experiments 1 (Underwood and Shier), 14, 77.
Sheep, changes in the concentrations of carotene and of vitamin A in the blood of, grazing on natural pastures in South Australia (Peirce), 24, 231.
Sheep dosed with phenothiazine, examination of the urine of (Lipson), 18, 269.
Sheep, effect of intake of carotene on the general health and on the concentration of carotene and of vitamin A in the blood and liver of (Peirce), 23, 295.
Sheep, food intake of, effect of hexoestrol on the (Austin, Whitten, Franklin and Reid), 25, 343.
Sheep, metabolism of thiamin in the (Austin), 25, 147.
Sheep, method of establishing pure infestations with adult trichostrongylids in (Gordon), 11, 151.
Sheep, pica in, in the botulism areas of Western Australia, further experiments on the incidence and control of (Underwood, Beck and Shier), 17, 183.
Sheep, presence of a Rickettsia-like organism in the lymphocytes of (Gordon), 11, 95.
Sheep, saliva of, observations on the secretion of phosphorus in (Watson), 11, 67.
Sheep, threshold for the renal excretion of inorganic phosphates in the (Watson), 11, 197.
Sheep, Merino, effects following thyroidectomy in (Marston and Peirce), 10, 203.
Sheep, Merino, nomogram connecting the standard metabolism, weight and surface area of (Lines), 9, 227.
Sheep, Merino, on pasture, concentration and distribution of phosphorus in the blood of (Watson), 11, 253.
Sheep, Merino, production of wool fleece by (Marston), 9, 235.
Shock, ischaemia and anoxaemia (Trethewie), 25, 291.
Shope Fibroma and myxoma, *see* **Myxoma.**
Shope's Fibroma Virus, serological relationship of myxoma virus and (Lush), 17, 85.
Skeletal Muscle, certain alleged effects of sympathetic nerves on, further observations on (Coates and Tiegs), 7, 37.
Skin Circulation of the naked Australian aboriginal, effect of changes of environmental temperature on the, as measured by the Sahli-Jaquet volume-bolograph (Hicks and O'Connor), 16, 19.
Skin Temperature and skin circulation of naked whites and Australian aboriginals exposed to similar environmental changes, a comparison of the (Goldby, Hicks, O'Connor and Sinclair), 16, 29.
Skin Temperature of Australian aboriginals under varying atmospheric conditions (Hicks and O'Connor), 16, 1.
Smallpox, *see* **Variola.**
Sminthurus viridis L. (Collembola), environmental factors affecting the development of the eggs of (Davidson), 11, 9.
Sminthurus viridis L. (Collembola), factors affecting oviposition of (Davidson), 10, 1.
Sminthurus viridis L. (Collembola) in South Australia, distribution of, based on rainfall, evaporation and temperature (Davidson), 11, 59.
Sminthurus viridis L. (Collembola), influence of temperature on the incubation period of the eggs of (Davidson), 8, 143.
Sminthurus viridis L. (Collembola), viability of the eggs of, in relation to their environment (Davidson), 10, 65.

Snail Tissue in culture, notes on some experiments with (Bourne), 13, 43.
Snake Venoms, *see* **Venom** *and* **Venoms.**
Snakes, serological and blood relationships of some common Australian (Kellaway and Williams), 8, 123.
Sodium Salts or water, effect of the injection of, into nephrectomized rats (O'Connor), 16, 95.
Soil, an Australian, bacteriological oxidation of sulphur in (Rountree), 11, 209.
Soils, cultivated and bush, in Victoria, the micro-organisms of (Dixon), 5, 223.
Soils, some South Australian, notes on the occurrence of *Azotobacter* in (Beck), 13, 127.
Soils, South Australian, stimulating effect of phosphatic fertilizers on azofication in (Lewcock), 2, 127.
Soya Bean (*Glycine hispida*), variations in the urease content of different varieties of (Hindmarsh), 3, 167.
Soya Beans, sulphur distributions, with special reference to the cystine plus cysteine and methionine contents, of seeds and seed proteins of two varieties of Johanson and Lugg), 24, 321.
Specificity, organ, study in (Davies, Kellaway and Williams), 2, 117.
Spectro-Colorimeter, a simple (Holden), 4, 221.
Spectrum Analysis, a simple micro-Baly tube for absorption (Hicks), 8, 199.
Spinal Cord, structure of, further remarks on the (Tiegs), 3, 161.
Spinal Cord, structure of the neurone junctions of (Tiegs), 3, 69.
Spinal Cord, structure of the neurone junctions of, a further note (Tiegs), 4, 25.
Spinal Cord, symptomatology of complete transverse lesions of (Hunter and Royle), 1, 57.
Spinal Cord, theory of discontinuous synapses in the, a critical review of the evidence (Tiegs), 4, 193.
Spirochaeta penortha (n. sp.) isolated from foot-rot in sheep, a study of (Beveridge), 14, 307.
Staphylococcal Beta Toxin and its production by strains isolated from staphylococcal lesions in man, observations on (Christie and North), 19, 323.
Staphylococci, coagulase production by, plate test for (Woods and Parkin), 24, 33.
Staphylococci, criteria of pathogenicity in (Christie, North and Parkin), 24, 73.
Staphylococci, dissociation of, into alpha and beta toxigenic variants (Rountree), 14, 93.
Staphylococci, fibrinolysin and beta toxins of, some observations on (Rountree), 25, 359.
Staphylococci, use of slide agglutination to determine pathogenicity of (Christie), 18, 397.
Starches, commercial, breakdown of, by muscle extract (Fantl and Rome), 20, 187.
Starvation, intermittent, influence of, and of intermittent starvation plus nucleic acid on the growth and longevity of the white mouse (Robertson, Marston and Walters), 12, 33.
Sterol of *Boletus granulatus* (Marston), 1, 53.
Sterol Fraction of Australian marine molluscs (Fantl), 20, 55.
Sterols, mixed, of maize, simple laboratory preparation of the (Holden), 20, 103.
Streptobacillus moniliformis, occurrence of lipoid structures in cultures of (Williams), 19, 255.
Streptococci, group B, lytic phenomenon shown by, further notes on a (Murch-Petersen, Christie and Simmons, with the technical assistance of Beddome), 23, 193.
Streptococci, group B, lytic phenomenon shown by, note on a (Christie, Atkins and Munch-Petersen), 22, 197.
Streptococci, haemolytic, from human sources, studies on.
1. Cultural characteristics of potentially virulent strains (Ward and Rudd), 16, 181.
2. The differentiation of group A (Lancefield) organisms into serological types (Griffith) (Rudd, White and Ward), 17, 25.

Streptococci, haemolytic, group A, note on a cultural test for (Ward and Rudd), 17, 77.
Streptococci, haemolytic, of groups B, C and G from human sources, physiological characters and serological types of (Simmons and Keogh), 18, 151.
Streptococcus haemolyticus (group A), use of stained smears for the rapid diagnosis of infection with (Butler), 25, 87.
Streptococcus pyogenes (group A): review of 1,341 strains collected from various human sources (Keogh, Simmons and Wilson), 19, 51.
Sucrose, fermentation by yeast at 0° C., analysis of, with some remarks on "selective fermentation" (Gottschalk), 23, 261.
Sulphanilamides and other primary aromatic amines in body fluids, estimation of (Fantl), 18, 175.
Sulphhaemoglobin, studies on (Lemberg, Holden, Legge and Lockwood), 20, 161.
Sulphur in an Australian soil, bacteriological oxidation of (Rountree), 11, 209.
Sulphur present in the seeds of certain legumes, with special reference to the cystine plus cysteine and methionine contents of the proteins (Lugg and Weller), 22, 149.

Sulphydril Compounds, influence of, upon the action of insulin (Corkill and Ennor), 18, 379.
Sulphydryl Compounds, insulin inactivation by (Corkill, Ennor and Nelson), 20, 15.
Surface Tension changes underlying muscular and amoeboid movement (Tiegs), 3, 1.
Synanceja horrida, haemotoxin of venom of (Duhig and Jones), 5, 173.
Synapses in the spinal cord, a critical review of the evidence on which is based the theory of discontinuous (Tiegs), 4, 193.

Taurine, substitution of, for cystine in diet of mice (Mitchell), 1, 5.
Tertiary Red Sands, near Melbourne, Victoria, micro-organisms of the (Dixon), 7, 161.
Tethelin as a tissue-culture medium (Richardson and Horning), 6, 137.
Tethelin, experiments on the influence of, upon the growth and longevity of the white mouse (Robertson and Ray), 2, 173.
Thiamin (vitamin B) and riboflavin, urinary excretion of, relation between urinary volume and the, of a man fed on a constant diet (Francis and Slater), 23, 119.
Thiamin, estimation of, by the thiochrome method, and on the excretion of thiamine, effect of salicylates on the (Cleland), 21, 153.
Thiamin in urine, milk and cereal products, thiochrome method of estimating (Slater), 19, 29.
Thiamin, metabolism of, in the sheep (Austin), 25, 147.
Thiamin Content of rat tissue, effect of salicylates and thiamine deficiency on the (Cleland), 24, 227.
Thiamin Deficiency, effect of, on the urinary excretion and liver content of riboflavin in the rat (Kratzing), 25, 157.
Thiobacillus concretivorus (nov. spec.), function of, in the corrosion of concrete exposed to atmospheres containing hydrogen sulphide (Parker), 23, 91.
Thiochrome Method of estimating thiamin (vitamin B_1) in urine, milk and cereal products (Slater), 19, 29.
Thiol-Vitamin K Mechanism in the clotting of fibrinogen (Lyons), 23, 131.
Thirst, experimental observations upon, and on potassium overdosage (Arden), 12, 121.
Thorium Oleate in oleic acid, influence of injections of, on growth and longevity of the white mouse (Robertson, Dawbarn, Thomas, Walters and Wilson), 11, 99.
Thymoxyethyl-Diethylamine, treatment of phosgene poisoning with (Trethewie), 25, 323.
Thymoxyethyl - Diethylamine Antagonism and anti-histamines (Trethewie), 25, 319.
Thyroid alone and thyroid administered together with nucleic acids, influence of, upon the growth and longevity of the white mouse (Robertson), 5, 69.
Thyroid, intermittent administration of, upon growth and longevity of the white mouse (Robertson, Dawbarn, Walters and Wilson), 11, 219.
Thyroid involution in the guinea-pig after prolonged administration of the thyrotrophic hormone, with determinations of the adrenal ascorbic acid, factors influencing (Trikojus and Ellis), 17, 441.
Thyroid Feeding, effect of, on the oestrus cycle of the guinea-pig and mouse (Cameron and Amies), 3, 37.
Thyroid Glands of sheep in South Australia, seasonal variation in the iodine percentage and dry weight of the (Dawbarn), 6, 65.
Thyroid Glands of sheep under uniform and varying conditions, variations in the dry weight and iodine content of the (Dawbarn and Farr), 10, 119.
Thyroidectomy in merino sheep, effects following (Marston and Peirce), 10, 203.
Ticks, *see* under specific names.
Tiger Snake, *see* **Notechis scutatus.**
Tissue Injury by toxins of *Cl. welchii*, and the liberation of pharmacologically active substances by the toxins of *Cl. welchii* types B and C (Kellaway and Trethewie), 19, 77.
Tissue Injury by heat, studies on.
1. The influence of anoxia (Kellaway and Rawlinson), 22, 63.
2. The liberation of enzymes from the perfused liver (Rawlinson and Kellaway), 22, 69.
3. Isolated limb preparations (Kellaway and Rawlinson), 22, 83.

Tissue Injury by radiant energy and the liberation of histamine (Kellaway, Holden and Trethewie), 16, 331.
Tissue Injury by toxin of *Cl. welchii*, type A (Kellaway and Trethewie), 19, 17.
Tissue Injury by trypsin (Trethewie), 20, 49.
Tissue Injury by volatile and gaseous anaesthetics (Kellaway and Trethewie), 17, 225.
Tissues, liberation of pharmacologically active substances from, by chloroform (Trethewie), 19, 175.
Tissues (normal and neoplastic), survival and growth of human and rabbit, on the chorio-allantois of the chick and duck embryo, note on the (Hurst, Cooke and McLennan), 17, 215.

Tobacco Mosaic and tomato spotted wilt, effect of light and temperature on the development of primary lesions of the viruses of (Best), 14, 223.

Tobacco Mosaic Virus complex at its isoelectric point, precipitation of the (Best), 14, 1.

Tobacco Mosaic Virus, effects of infection of tobacco plants (*Nicotiana tobacum*) with, on some of the properties of the protein present in the leaves (Lugg and Best), 23, 235.

Tobacco Mosaic Virus *in vitro*, physical states assumed by, further studies on the (Best), 25, 283.

Tobacco Mosaic Virus nucleoprotein (*Marmor tabaci* var. *vulgare* Holmes), action of electrolytes on solutions of (Best), 18, 307.

Tobacco Mosaic Virus nucleoprotein, (*Marmor tabaci* var. *vulgare* Holmes), methods for the preparation of pure (Best), 18, 401.

Tobacco Mosaic Virus protein, partial composition of: the amide, tyrosine, tryptophane, cystine (plus cysteine) and methionine contents (Best and Lugg), 22, 247.

Tobacco Mosaic Virus, rate of inactivation of, by potassium salicylate (Best), 23, 221.

Tobacco Mosaic Virus, serology of the.

1. The agglutination reaction with homologous antisera (Atkinson), 17, 333.
2. The action of various salts and salt concentrations in the agglutination reaction (Atkinson), 22, 231.

Tobacco Mosaic Virus suspensions, relationship between the activity of, and hydrion concentration over the pH range of 5 to 10 (Best), 14, 323.

Tobacco Mosaics, ordinary and yellow, quantitative estimation of relative concentrations of the viruses of, and of spotted wilt by the primary lesion method (Best), 15, 65.

Tobacco Plant, physiological ontogeny in the (Petrie, Watson and Ward), 17, 93.

2. The drifts in water content of the leaves in relation to phosphorus supply and topping (Watson), 17, 241.
3. The drifts in organic-acid content of the leaves in relation to phosphorus supply and topping (Ward and Petrie), 18, 21.
4. The drift of nitrogen content of the parts in relation to phosphorus supply and topping, with an analysis of the determination of ontogenetic changes (Watson and Petrie), 18, 313.

Tobacco Plant, physiological ontogeny in the. Effect of varying water supply on the drifts in dry weight and leaf area and on various components of the leaves (Petrie and Arthur), compiled by Wood, 21, 191.

Tomato Fruits, growth and respiration of, and their relationship to carbohydrate content, studies in the (Beadle), 15, 173.

Tomato Spotted Wilt and tobacco mosaic, effect of light and temperature on the development of primary lesions of the viruses of (Best), 14, 223.

Tomato Spotted Wilt, preservative effect of some reducing systems on the virus of (Best), 17, 1.

Tomato Spotted Wilt, quantitative estimation of relative concentrations of the virus of, by the primary lesion method (Best), 15, 65.

Tomato Spotted Wilt, some effects of, on growth (Greive), 21, 89.

Tomato Spotted Wilt Virus, inactivation of, by salicylate (Best), 24, 27.

Tomato Spotted Wilt Virus, on the presence of an "oxidase" in the juice expressed from tomato plants infected with (Best), 15, 191.

Tomato Spotted Wilt Virus, thermal inactivation of, Part 1 (Best), 24, 21.

Toxins, detoxication of, studies on the: catalytic breakdown of crystalline ovalbumin (Petherick and Singer), 23, 171.

Transpiration Ratio in plants, effect of nitrate supply on (Ballard), 11, 161.

Transpiration Ratio in plants, effect of phosphorus supply on, analysis of (Williams), 13, 49.

Trematodes, new, from South Australian Elasmobranchs (Johnston), 12, 25.

Trematodes, new, from Subantarctic and Antarctic (Johnston), 8, 91.

Tribolium confusum Duval, alteration of sex ratio in the "flour beetle," following starvation of newly hatched larvae (Holdaway and Smith), 11, 35.

Trichostrongylids in sheep, method of establishing pure infestations with adult (Gordon), 11, 151.

Tribolium vulpecula, *see* **Opossum.**

Triticum vulgare, origin of a B-type speltoid in, preliminary note on the (Phipps and Gurney), 10, 215.

Trypanosoma melophagium, non-pathogenic, in the blood of Victorian sheep, on the presence of the (Turner and Murname), 7, 5.

Trypanosoma theileri in the blood of cattle in Victoria, a preliminary note on the occurrence of (Turner and Murnane), 7, 9.

Trypsin, tissue injury by (Trethewie), 20, 49.

Tryptophane Deficiency in diet, effect on sensitisation of mice to ultra-violet light (Dawbarn), 1, 73.

Tryptophane Feeding, studies in, 1 (Hicks), 3, 193.

Tumour Cells, chromidial extrusion and its relationship to atypical nuclear phenomena in (Horning and Miller), 7, 151.

Tumours, effect of metabolic inhibitors on the therapeutic irradiation of mouse (Harker and Moppett), 14, 15.

Tumours, lymphoid, occurring in mice (Hill), 5, 89.

Ultra-Violet Irradiation, monochromatic, saltants produced in the fungus *Chaetomium globosum* by, and a growth effect characteristic of wavelength (McAulay, Plomley and Ford), 23, 53.

Ultra-Violet Light, sensitisation of mice to, by diet deficient in tryptophane (Dawbarn), 1, 73.

Uraemia, experimental hyperindicanaemia and its relation to (Earlam and Bolliger), 8, 209.

Urease Content, variations in, of different varieties of soya bean (Hindmarsh), 3, 167.

Uric Acid, presence of large amounts of, in the integument of mammals (Bolliger and Hardy), 23, 99.

Urinary Volume and urinary excretion of thiamin and riboflavin of a man fed on a constant diet, relation between (Francis and Slater), 23, 119.

Urine of cows, chemical composition of the (Dann), 11, 53.

Urine, potassium in the, titration method for the determination of (Bolliger and Day), 6, 91.

Urine, reaction of, studies in the (Kaye), 6, 187.

Urobilins and urobilinogens (Lemberg, Lockwood and Wyndham), 16, 169.

Vaccination with egg vaccine and standard calf lymph, application of red-cell agglutination by vaccinia virus to a comparative study of (Nagler), 22, 29.

Vaccinia Virus, *see* **Virus**, vaccinia.

Variola Virus, *see* **Viruses**, variola.

Venom, bee, *see* **Bee Venom.**

Venom, cobra, liberation of adenyl compounds from perfused organs by (Kellaway and Trethewie), 18, 63.

Venom of Australian copperhead (*Denisonia superba*), circulatory and pulmonary effects of the (Feldberg and Kellaway), 15, 81.

Venom of Australian copperhead (*Denisonia superba*), vaso-depressant action of the (Kellaway and Le Messurier), 14, 57.

Venom of the Indian cobra (*Naia naia*), circulatory effects of the, in cats (Feldberg and Kellaway), 15, 159.

Venom of Indian cobra (*Naia naia*), circulatory effects of the, in dogs (Feldberg and Kellaway), 15, 441.

Venom of large Australian snake *Pseudechis australis* (Gray), observations on the.

1. Synonymy (Thomson), 7, 125.
2. The venom yields and venom (Kellaway and Thomson), 7, 134.

Venom of melanotic insular variety of the tiger snake (*Notechis scutatus*), observations on the (Kellaway and Thomson), 10, 35.

Venom of ornamented snake *Denisonia maculata* (Kellaway), 12, 47.

Venom of platypus (*Ornithorhynchus anatinus* (Kellaway and LeMessurier), 13, 205.

Venom of *Synanceja horrida*, haemotoxin of the (Duhig and Jones), 5, 173.

Venom Glands, results of the excision of the, of the Australian tiger snake (*Notechis scutatus*) (Kellaway), 15, 121.

Venoms, Australian snake, fractionation of.

1. The venom of the death adder (*Acanthophis antarcticus*) (Kellaway, Freeman and Williams), 6, 245.
2. The venoms of the tiger snake (*Notechis scutatus*), black tiger snake (*Notechis scutatus* var. *niger*), and black snake (*Pseudechis porphyriacus*) (Holden), 11, 1.

Venoms, Australian snake, haemolysis by.

1. The comparative haemolytic power of Australian snake venoms (Kellaway and Williams), 11, 75.
2. Some peculiarities in the behaviour of the haemolysis of Australian snake venom (Kellaway and Williams), 11 81.
3. Some factors which influence the action of the venom of the copperhead (Holden), 12, 55.
4. Further studies on the haemolysin of the copperhead (Holden), 13, 103.

Venoms, Australian snake, peripheral action of the.

1. Curari-like action on frogs (Kellaway and Holden), 10, 167.
2. Curari-like action in mammals (Kellaway, Cherry and Williams), 10, 181.
3. Reversibility of the curari-like action (Kellaway), 10, 195.
4. Action on sensory nerve endings in frogs (Kellaway), 12, 177.

Venoms of *Oxyuranus maclennani* and of *Pseudechis scutellatus* (Kellaway and Williams), 6, 155.

Venoms of tiger snake, *Notechis scutatus* and the black tiger snake, *Notechis scutatus* var. *niger*, antigenic differences between the (Kellaway and Williams), 13, 17.

Venoms, snake, absorption spectra of some modified (Holden), 14, 121.

Venoms, snake, ultra-violet absorption spectra of (Holden and Setter), 13, 223.
Venoms, two Australian snake, comparison of haemolysis and liberation of histamine by (Trethewie), 17, 145.
Verco, Sir Joseph Cooke: biographical note (W.R.), 11, 153.
Verco, Sir Joseph Cooke, endowment, 3, 115.
Verdohaemochromogens, transformation of, into monoaza-haemins (Lemberg), 21, 239.
V. cholerae enzyme, comparison of the action of, and of viruses on the red cell surface (Stone), 25, 137.
V. cholerae filtrates, desquamation of intestinal epithelium *in vitro* by. Characterization of mucinase and tissue disintegrating enzymes (Burnet and Stone), 25, 219.
V. cholerae, receptor-destroying enzyme of (Burnet and Stone), 25, 227.
Vines, physiological derangements in, subsequent to injury by cold (Wood), 6, 103.
Virus B. and herpes virus, relationship of: immunological and epidemiological considerations (Burnet, Lush and Jackson), 17, 41.
Virus B., herpes and pseudorabies viruses, propagation of, on the chorio-allantois (Burnet, Lush and Jackson), 17, 35.
Virus, herpes and B. virus, relationship of: immunological and epidemiological considerations (Burnet, Lush and Jackson), 17, 41.
Virus, herpes, B. and pseudorabies viruses, propagation of, on the chorio-allantois (Burnet, Lush and Jackson), 17, 35.
Virus, influenza, *see* **Influenza Virus.**
Virus, louping ill, infection of the central nervous system by. An investigation by the quantitative egg membrane technique (Burnet and Lush), 16, 233.
Virus, myxoma, *see* **Myxoma Virus.**
Virus of infectious myxomatosis of rabbits on the chorioallantoic membrane of the developing egg (Lush), 15, 131.
Virus, plant, suspensions of, use of numbers of infections for comparing the concentration of.
4. Modification of the simple dilution equation (Bald), 15, 211.
Virus, pseudorabies, herpes and B viruses, the propagation of, on the chorio-allantois (Burnet, Lush and Jackson), 17, 35.
Virus, psittacosis, *see* **Psittacosis Virus.**
Virus, Shope's fibroma, *see* **Shope's Fibroma Virus.**
Virus, tobacco mosaic, *see* **Tobacco Mosaic Virus.**
Virus, vaccinia, kinetics of formalin disinfection of (Keogh), 15, 109.
Virus, vaccinia, red cell agglutination by. Application to a comparative study of vaccination with egg vaccine and standard calf lymph (Nagler), 22, 29.
Virus Disease of roses occurring in Australia: "rose wilt" and "dieback" (Grieve), 8, 107.
Virus Infection, production of a fluorescent substance as a result of, and some applications of the phenomenon (Best), 14, 199.
Viruses, action of certain surface-active agents on (Burnet and Lush), 18, 141.
Viruses, animal (herpes, infectious myxoma, Shope fibroma, vaccinia, poliomyelitis), inactivating effect of salicylate on suspensions of (Cooke and Best), 19, 93.
Viruses, comparison of the action of, and of *V. cholerae* enzyme, on the red cell surface (Stone), 25, 137.
Viruses, filterable, immunological reactions of the (Burnet, Keogh and Lush), 15, 227.
Viruses, plant, serological studies on (Mushin), 20, 59.
Viruses, routes of entry into the nervous system of, introduced into the blood stream. Experiments with the viruses of pseudorabies, herpes and infectious myxomatosis (Cooke, Hurst and Swan), 20, 129.
Viruses, variola and vaccinia, grown in the developing egg, study of the immunological reactions of the (North), 22, 105.
Vitamin A and carotene, changes in the concentrations of, in the blood and liver of lambs with increase in age, and in the colostrum of ewes (Peirce), 25, 111.
Vitamin A and carotene, changes in the concentrations of, in the blood of sheep grazing on natural pastures in South Australia (Peirce), 24, 231.
Vitamin A and vitamin D content of some Australian fish liver oils (Cunningham and Slater), 17, 457.
Vitamin A content of mutton bird oil (Davies), 17, 81.
Vitamin C, accumulation of, during germination in peas (Robertson), 25, 41.
Vitamin C, content of dried lucerne (*Medicago sativa*); chemical and biological assays (Dawbarn), 23, 289.
Vitamin C, determination of, by the growth of guinea-pigs (Dawbarn), 23, 281.
Vitamin C, distribution of, in the lower organisms (Bourne and Allen), 13, 165.
Vitamin C, distribution of, in the organs of the fox (*Vulpes vulpes*), (Bourne), 13, 113.
Vitamin C, germinating seeds as a source of, in human nutrition.
1. Ascorbic and dehydroascorbic acid contents of several varieties of seeds germinating under standard conditions for varying periods of time (Lugg and Weller), 21, 111.

2. The germinating and processing of blue boiler peas (*Pisum sativum*) as a palatable source of vitamin C (Lugg and Weller), 21, 211.

Vitamin C in the adrenal glands, staining of (Bourne), 11, 261.

Vitamin C, *see also* **Ascorbic Acid.**

Vitamin D and vitamin A content of some Australian fish liver oils (Cunningham and Slater), 17, 457.

Vitamin D and vitamins A + D, effects of moderate overdosage of, on the growth rate and longevity of the white mouse (Robertson, Marston, Dawbarn, Walters and Wilson), 9, 203.

Part 2 (Robertson, Marston, Dawbarn, Walters and Wilson), 11, 49.

Vitamin D content of mutton bird oil (Davies), 17, 81.

Vitamins, mitochondria and Golgi apparatus (Bourne), 13, 239.

Water, *B. coli* in, false positive reaction in the presumptive test for (Atkinson and Wood), 16, 111.

Water, coli-aerogenes group in, comparative study of methods for the detection of the (Atkinson and Wood), 16, 103.

Water in living tissues, distribution of (Cox and Hicks), 11, 269.

Water or sodium salts, effect of the injection of, into nephrectomized rats (O'Connor), 16, 95.

Water, selective absorption by leaves of *Atriplex* (Wood), 2, 45.

Water Balance of rabbits, effect of pituitrin on the (Cox and Hicks), 11, 288.

Weight-Burette, simple, for use in organic analysis (Fantl), 19, 279.

Weights of animals of same generation, applicability of law of fortuitous distribution of individual variations in (Robertson and Ray), 2, 91.

Wheat x Rye Hybrids of the 5th and 6th generation, cytology of (Gurney), 11, 123.

Wheat, Australian, and wheat products, application of a recent modification of the fluorometric method of determining riboflavin to some samples of (Morell), 25, 251.

Wheat grown in eastern Australia, inorganic composition of, some observations on the (Dadswell), 13, 33.

Wheat Cytology, Feulgen's reaction as a critical stain for, note on the use of (Gurney), 11, 157.

Whetham's Law, application to the coagulation of colloidal platinum (Pennycuick), 4, 99.

Whooping Cough, *see* **Pertussis.**

Wines, fortified, bacterium causing "disease" in (Fornachon), 14, 215.

Wool, cuticle of, electron microscope investigation of the (Mercer and Rees), 24, 147.

Wool, lumpy or matted, *see* **Dermatomycosis.**

Wool Fleece, production of, by merino sheep (Marston), 9, 235.

Worm Nodule, *see* **Onchocerca gibsoni.**

X-Disease, *see* **Encephalitis**, acute.

Xantha Seedlings in maize, inheritance and linkage relations of (Gurney), 7, 215.

Xerophytism in Australian plants, physiology of (Wood), 10, 89.

Xerophytism in Australian plants, physiology of. Carbohydrate changes in the leaves of sclerophyll plants (Wood), 11, 139.

Yeast Cell, action of ether on.

1. Carboxylase (Kerr and Young), 3, 187.

Yeast Cells, autolysing, liberation of aneurin, cocarboxylase, riboflavin and nicotinic acid from (Farrer), 24, 213.

Yeast Cells, fermenting, chemical equations of the phytochemical reductions by, and their relationship to the Pasteur effect (Gottschalk), 20, 173.

Yohimbine, pharmacology of, contribution to the (Hutchinson, Shaw and Wragge), 20, 69.

Zinc in plant materials, determination of (Walkley), 20, 139.
